GENERAL ASSEMBLY

JAVASCRIPT DEVELOPMENT

Sasha Vodnik, Instructor

JAVASCRIPT DEVELOPMENT

THE COMMAND LINE & DATA TYPES

THE COMMAND LINE & DATA TYPES

WEEKLY OVERVIEW

WEEK 1	Installfest / The Command Line & Data Types
WEEK 2	Arrays & Loops / Conditionals & Functions
WEEK 3	Scope / Slack bot lab

LEARNING OBJECTIVES

At the end of this class, you will be able to

- Work with files/directories via the terminal window
- Create a Git repository and push/pull changes
- Run basic JavaScript code on the command line
- Describe the concept of a "data type" and how it relates to variables.

AGENDA

- JS and web technology
- The terminal
- Git and GitHub
- Command line JS
- Data types

EXIT TICKET QUESTIONS

1. In regards to pseudocode, are there other industry best practices used, such as UML Diagrams/Flowcharts?
2. Do we need to turn in the pre-course work, or show its completion?
3. What's the TCP protocol?
4. Is the IE sticker on your water bottle ironic?
5. What are the specifications for the slackbot :D
6. I would like a way to make sure I actually installed all of my command line tools correctly.
7. How important is it that we understand the command line codes that we used today?

EXIT TICKET FEEDBACK

1. collaboration/working in groups++
2. how about sending out install instructions before class and spending class time troubleshooting if necessary?
3. not sure you needed to cover _____
4. slides in advance
5. google slides rather than pdf
6. pre-reading to prep for class
7. printed cheat sheets for common syntax

Think about last class:

- We installed software from the command line by typing commands
- We also installed software by downloading an installer, double-clicking it, and following the prompts

ACTIVITY

EXERCISE

KEY OBJECTIVE

- Use the most common commands to navigate and modify files / directories via the terminal window.

TYPE OF EXERCISE

- Turn and Talk

TIMING

2 min

1. List at least 2 advantages to using the command line.
2. List at least 2 disadvantages to using the command line.

JavaScript & Web Technology

WHAT CAN JAVASCRIPT DO?

Node.js

Node.js

- A definition (from Wikipedia):
  - In software development, Node.js is an open-source, cross-platform runtime environment for developing server-side Web applications.
- Enables JavaScript on the server (the backend)
- Written in C, C++, and JS (so, not a JS framework)
- Interprets JS using Chrome's V8 engine
- Module driven; see Node Package Manager (npm)
- All about non-blocking, asychronous input/output

Node.js

- We will not be using Node.js as a web server (backend) - see Firebase
- We will be taking advantage of Node's command line interface
- Allows us to run JavaScript from our terminal applications
- More at the end of class…

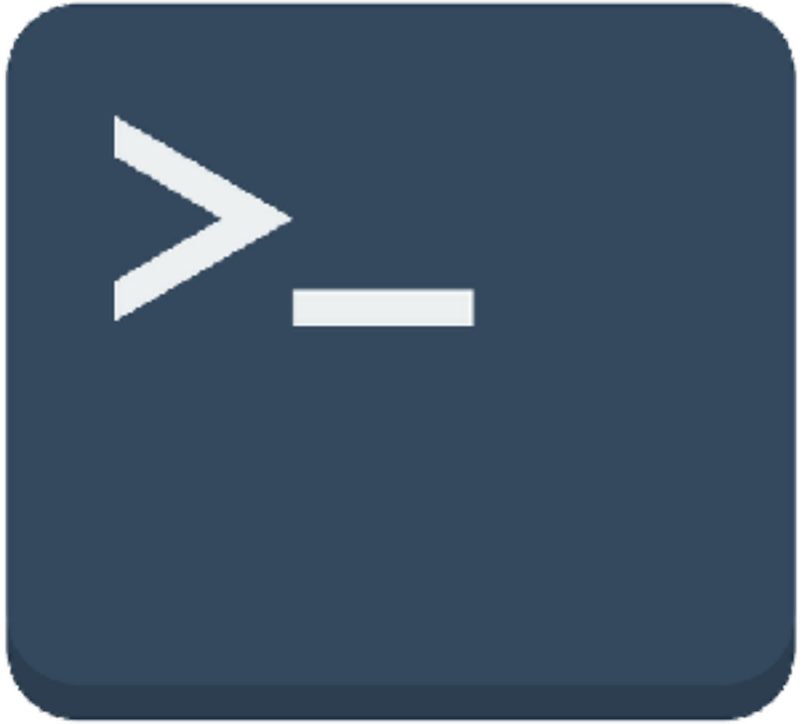
The Terminal

INTRODUCTION TO THE TERMINAL



- Terminal allows you to interact with your computer faster
- Terminal === Command Line === Console

UNIX

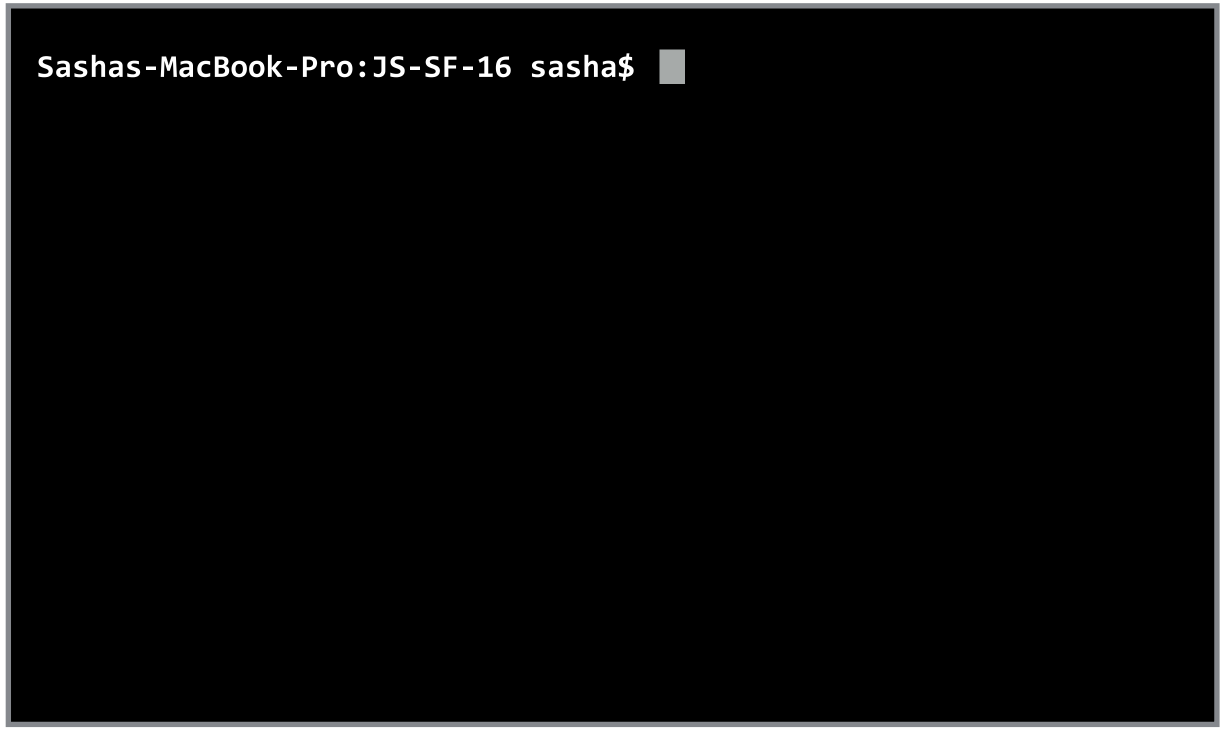
UNIX

- Family of operating systems, including all Linux systems and OS X/macOS

SHELL

- A generic name for the primary program that runs inside a terminal

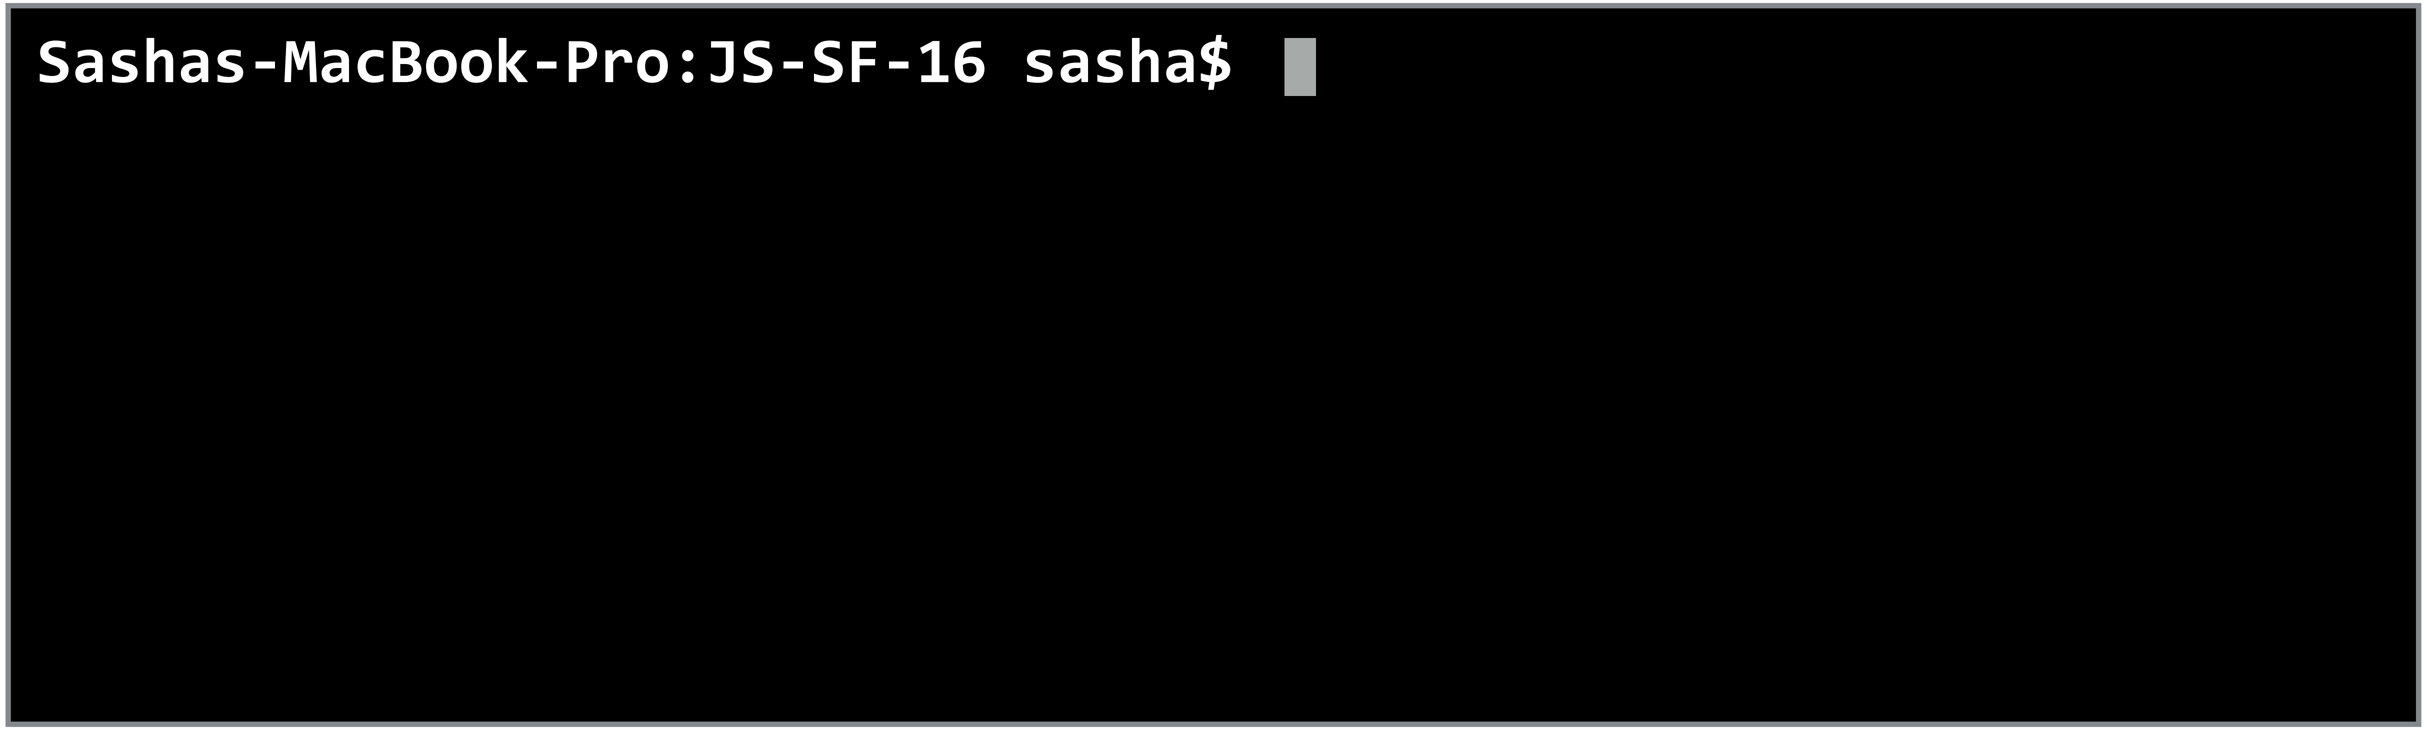
BASH



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ 
```

- Bourne-Again Shell: a specific shell program

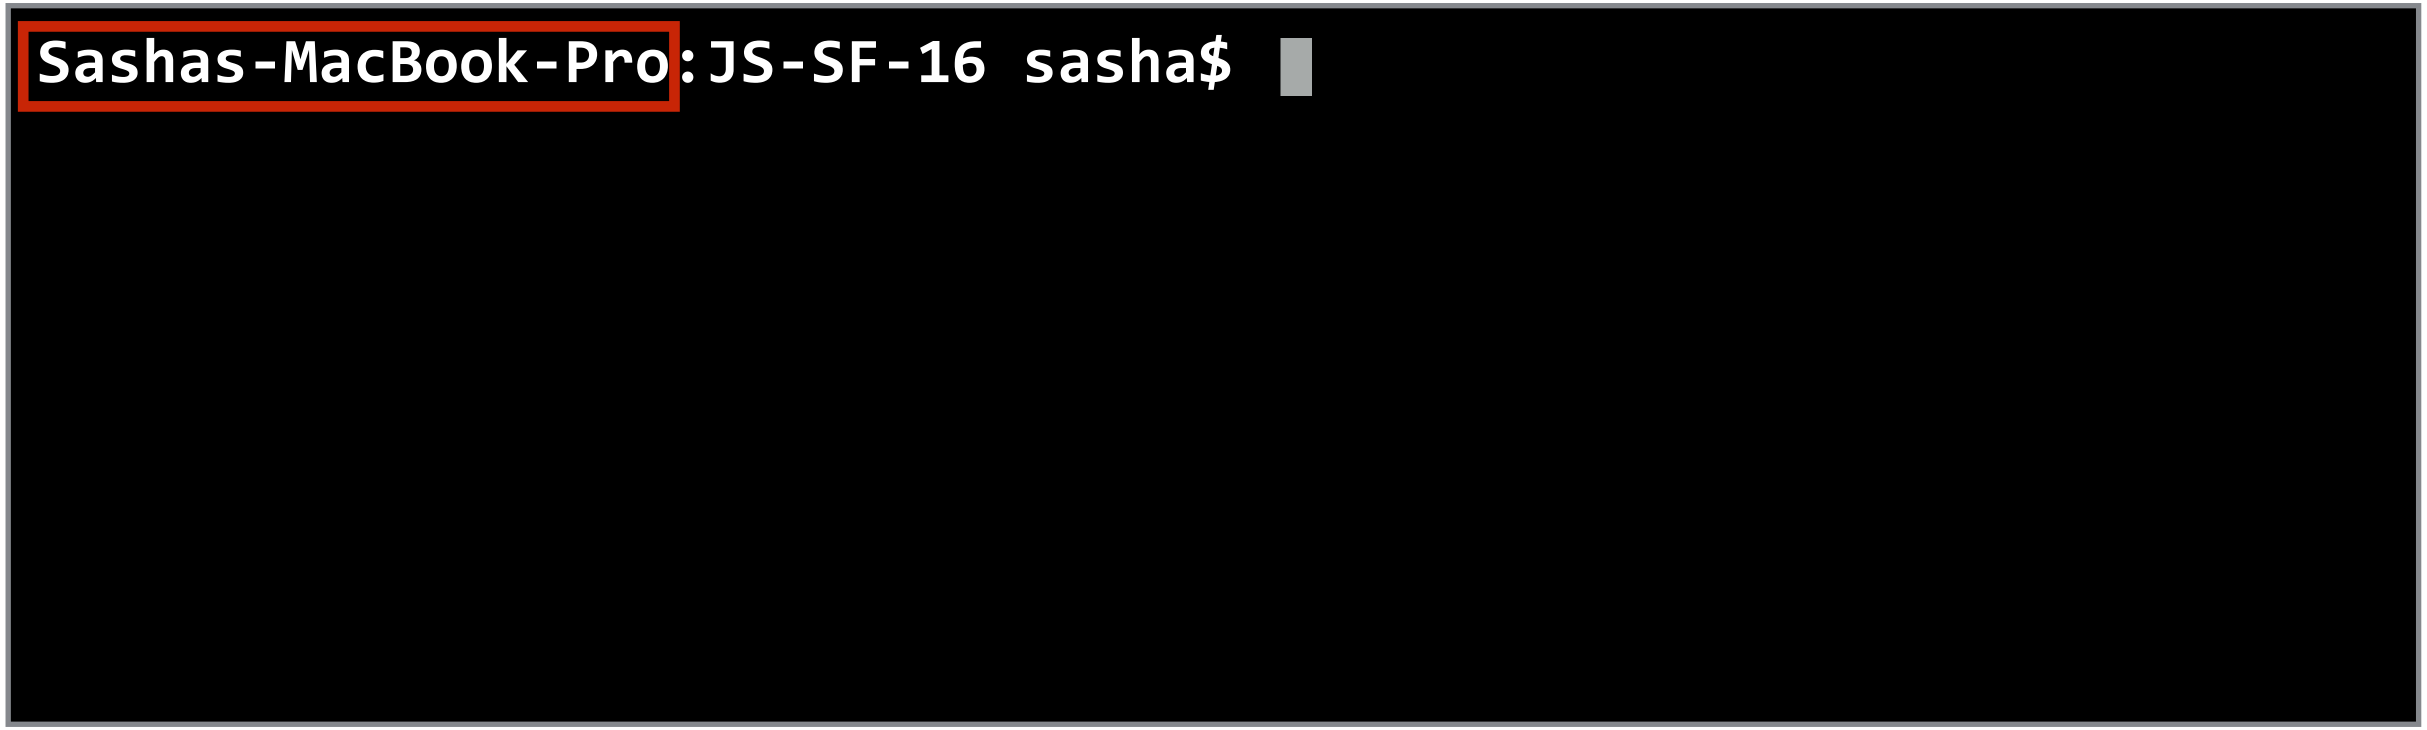
ANATOMY OF THE TERMINAL



```
Sashas-MacBook-Pro:JS-SF-16 sasha$
```

ANATOMY OF THE TERMINAL

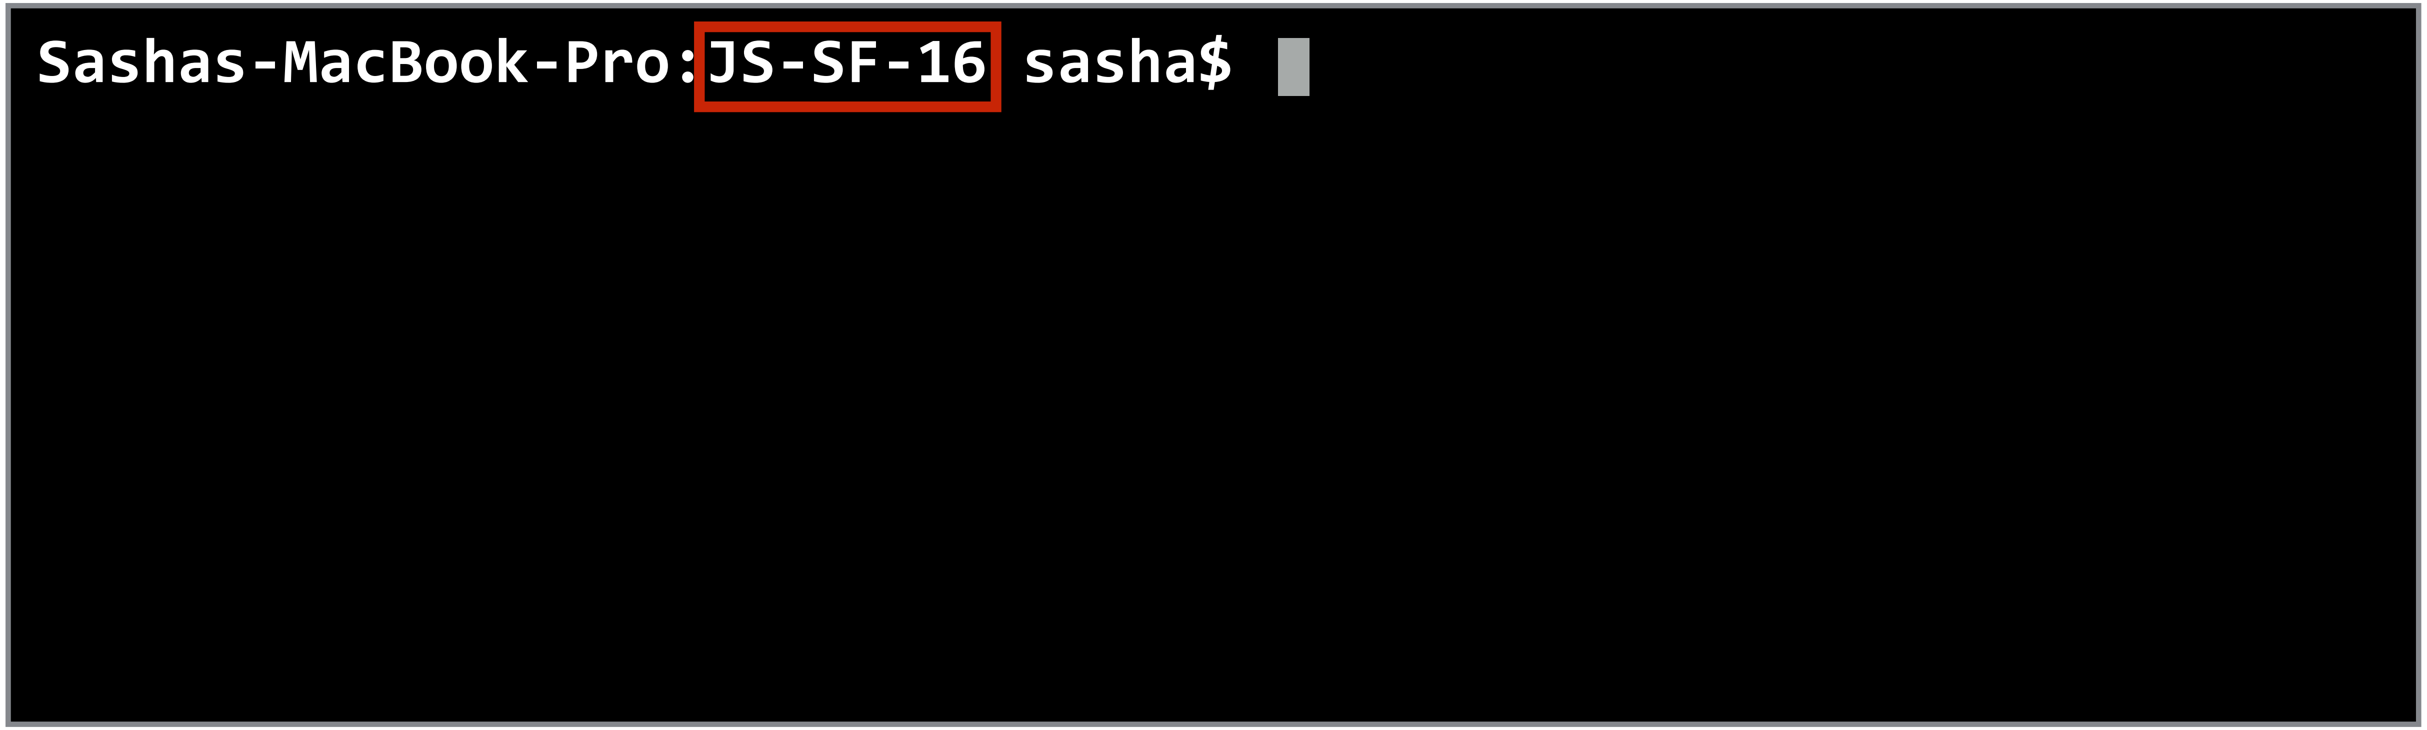
Host (computer) name



```
Sashas-MacBook-Pro:JS-SF-16 sasha$
```

ANATOMY OF THE TERMINAL

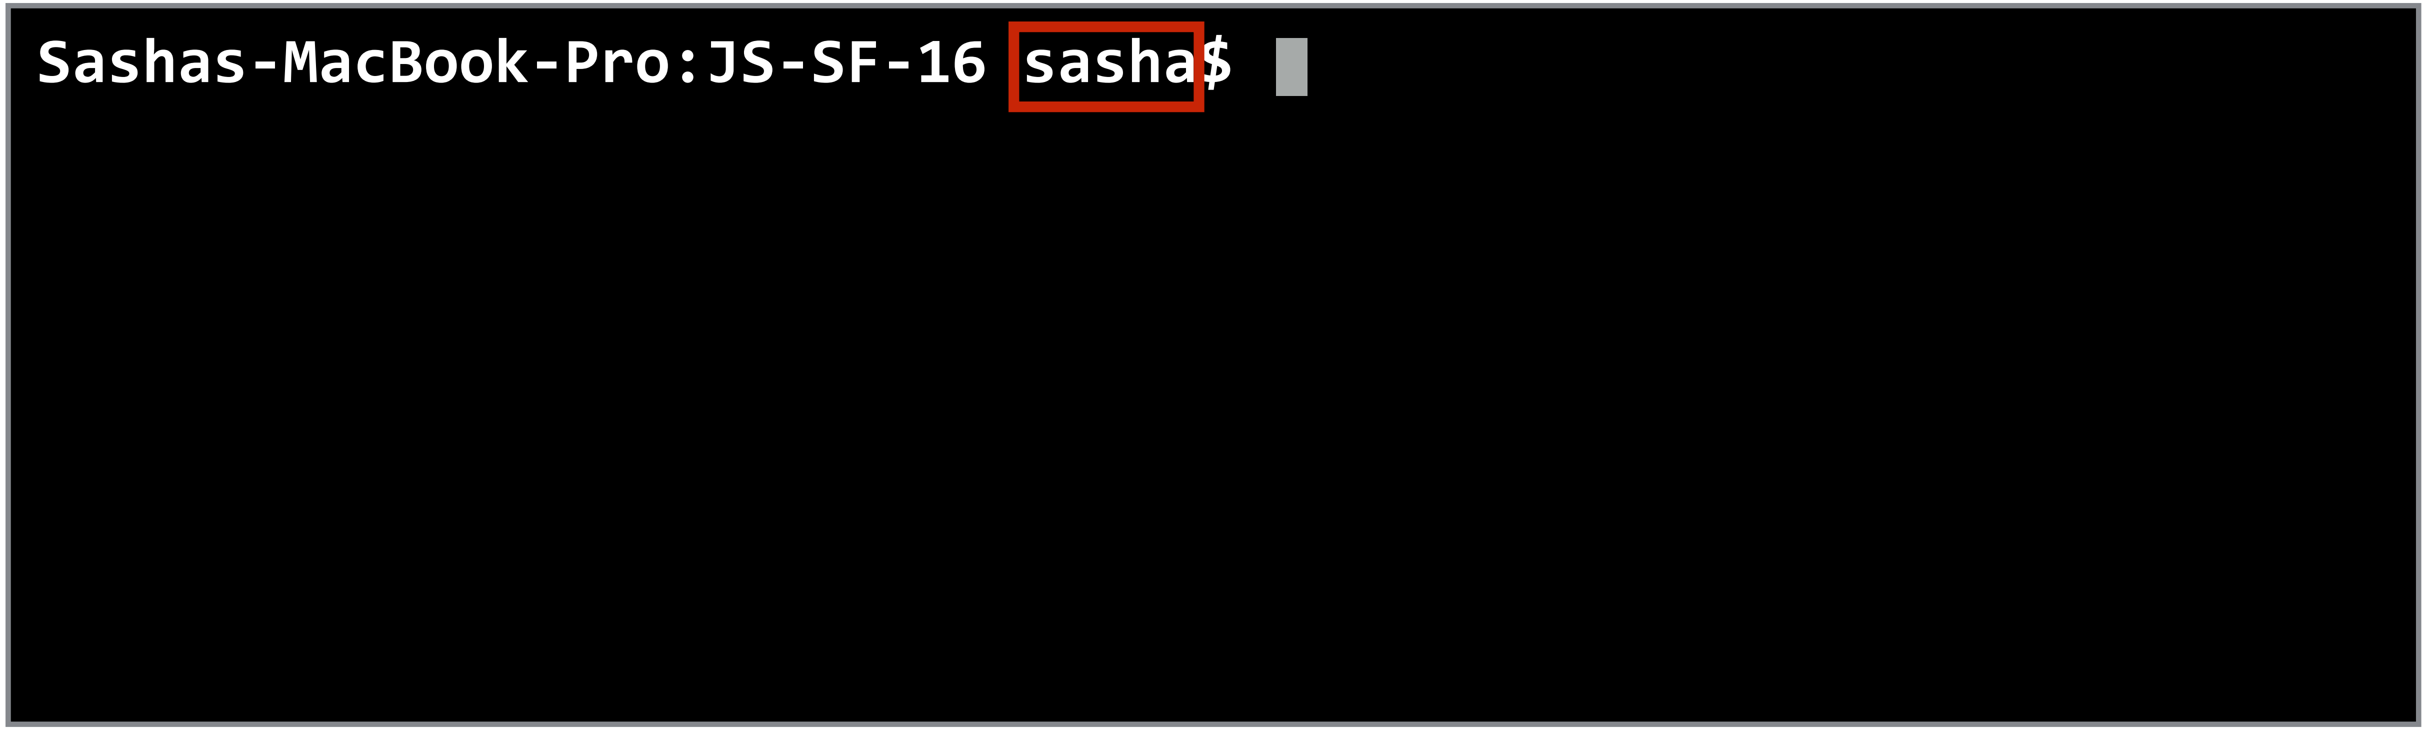
Working directory (current folder)



```
Sashas-MacBook-Pro:JS-SF-16 sasha$
```

ANATOMY OF THE TERMINAL

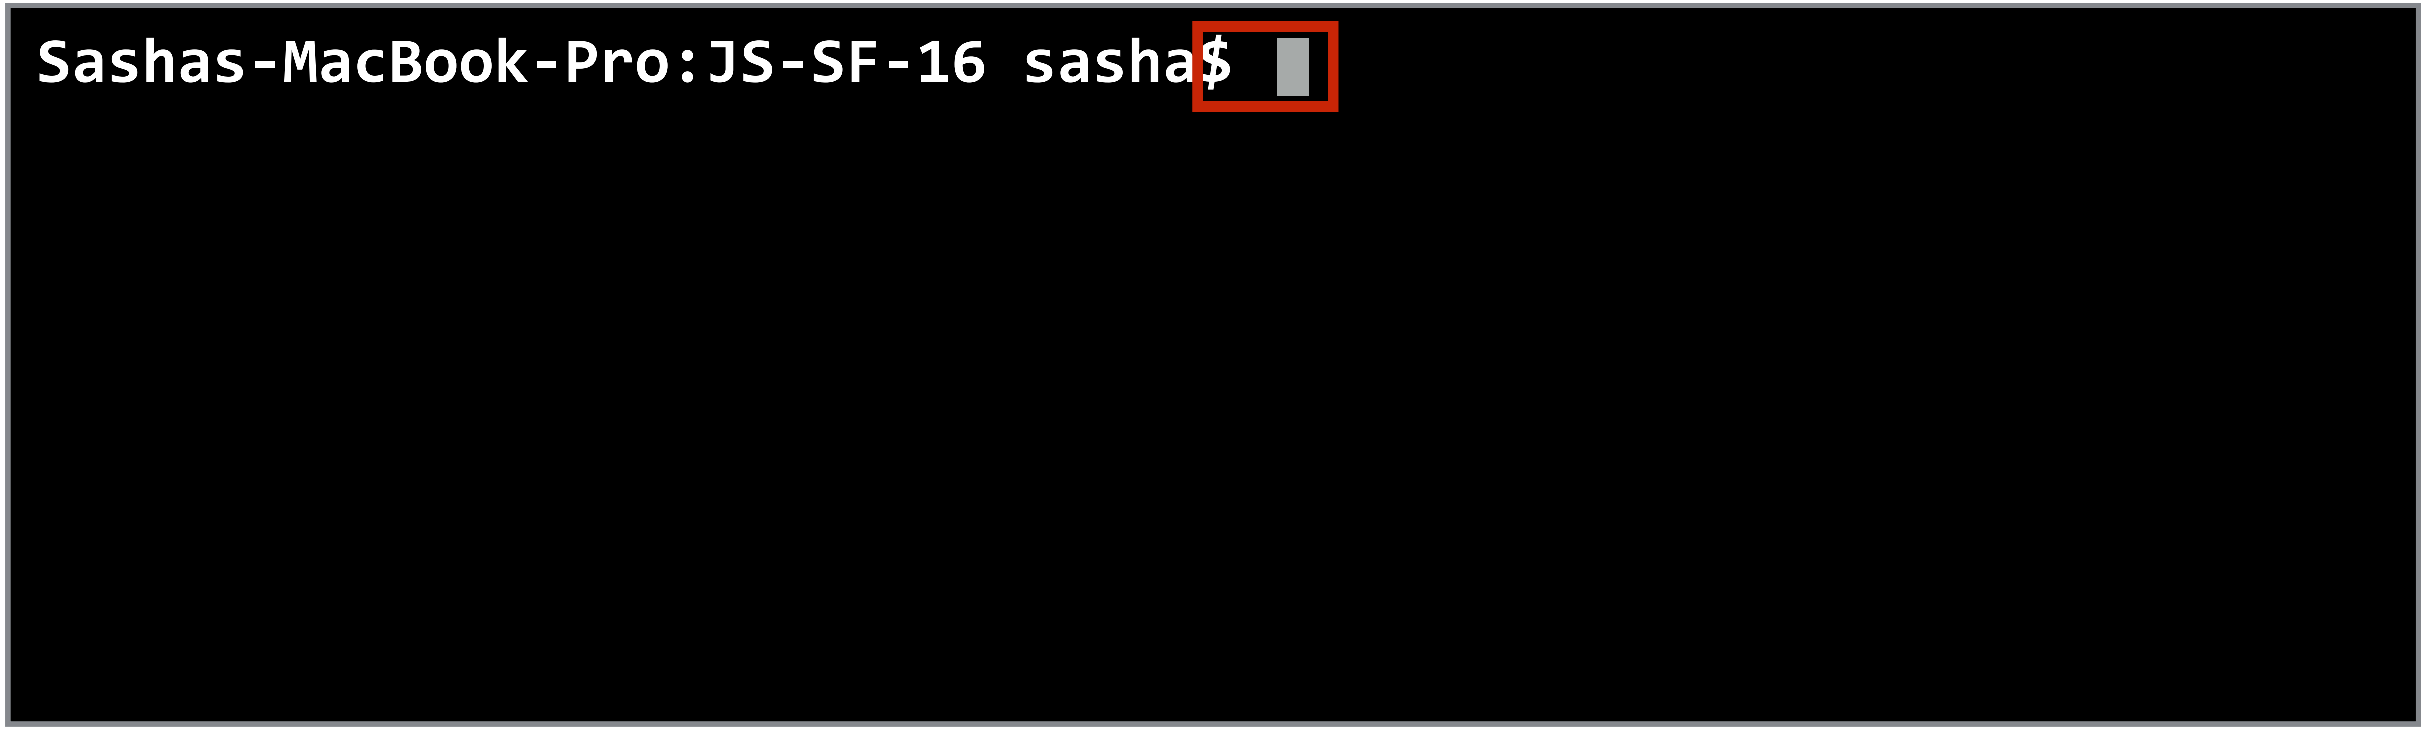
Username



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ 
```

ANATOMY OF THE TERMINAL

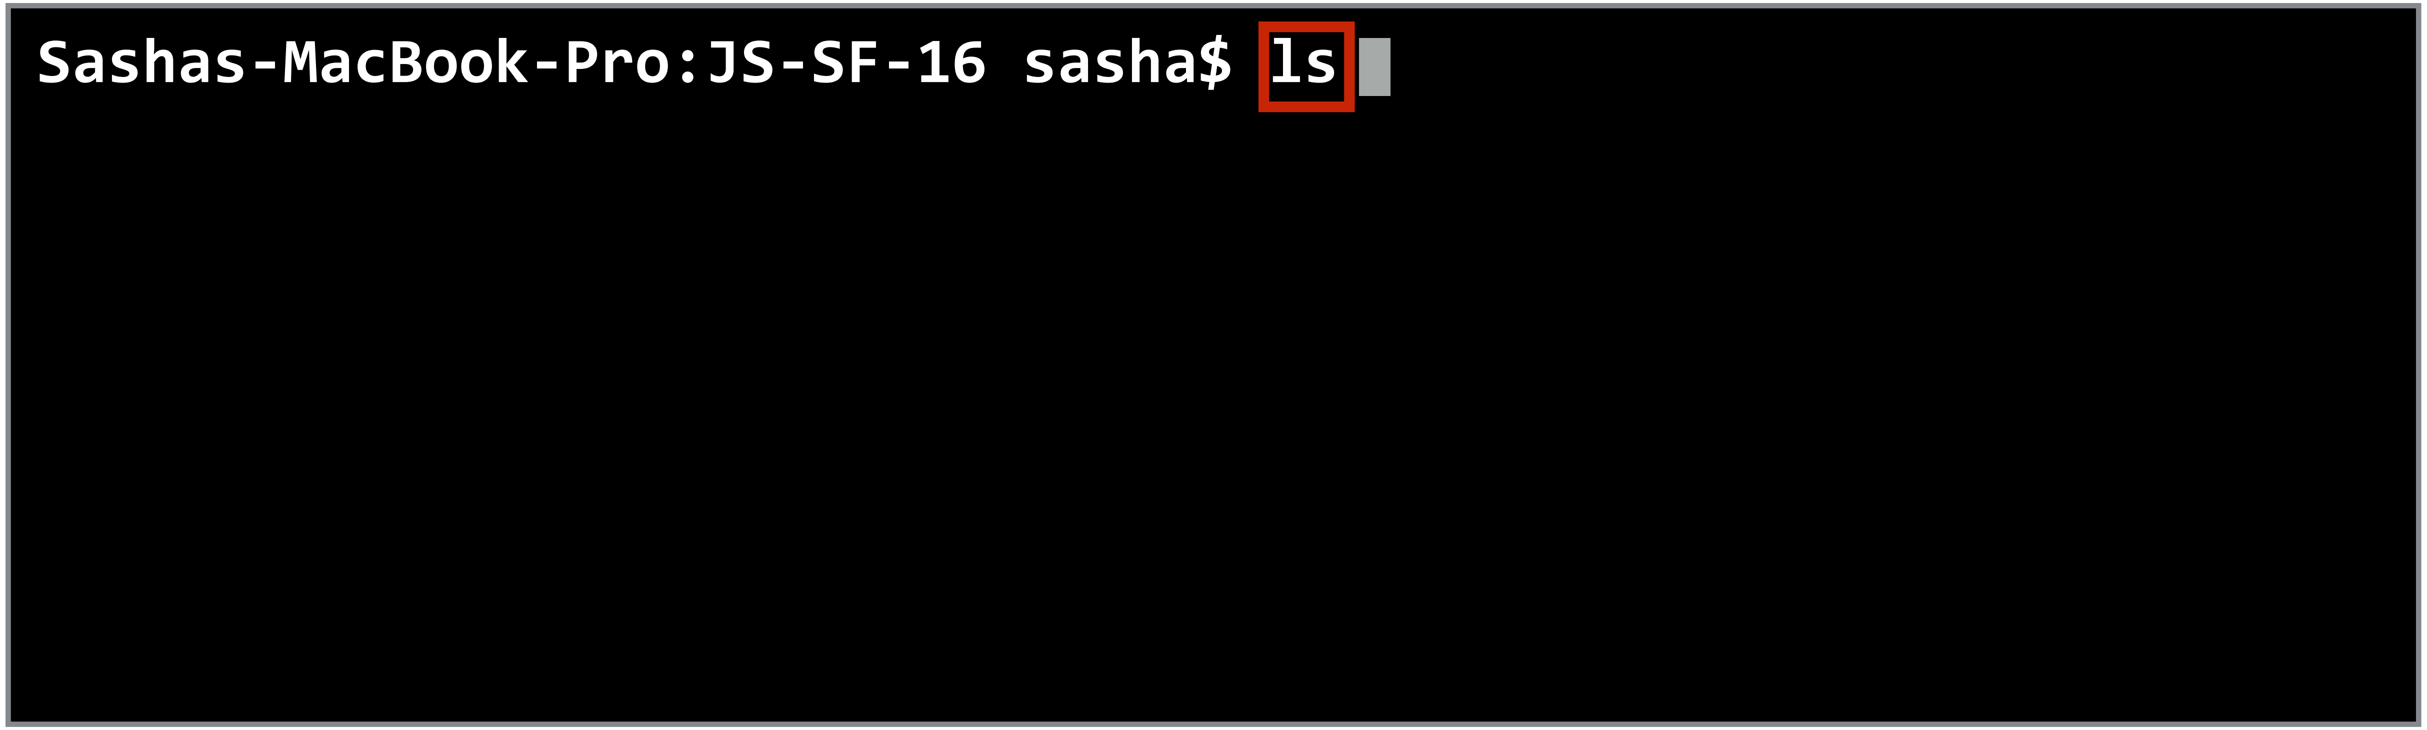
Bash prompt



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ 
```

ANATOMY OF THE TERMINAL

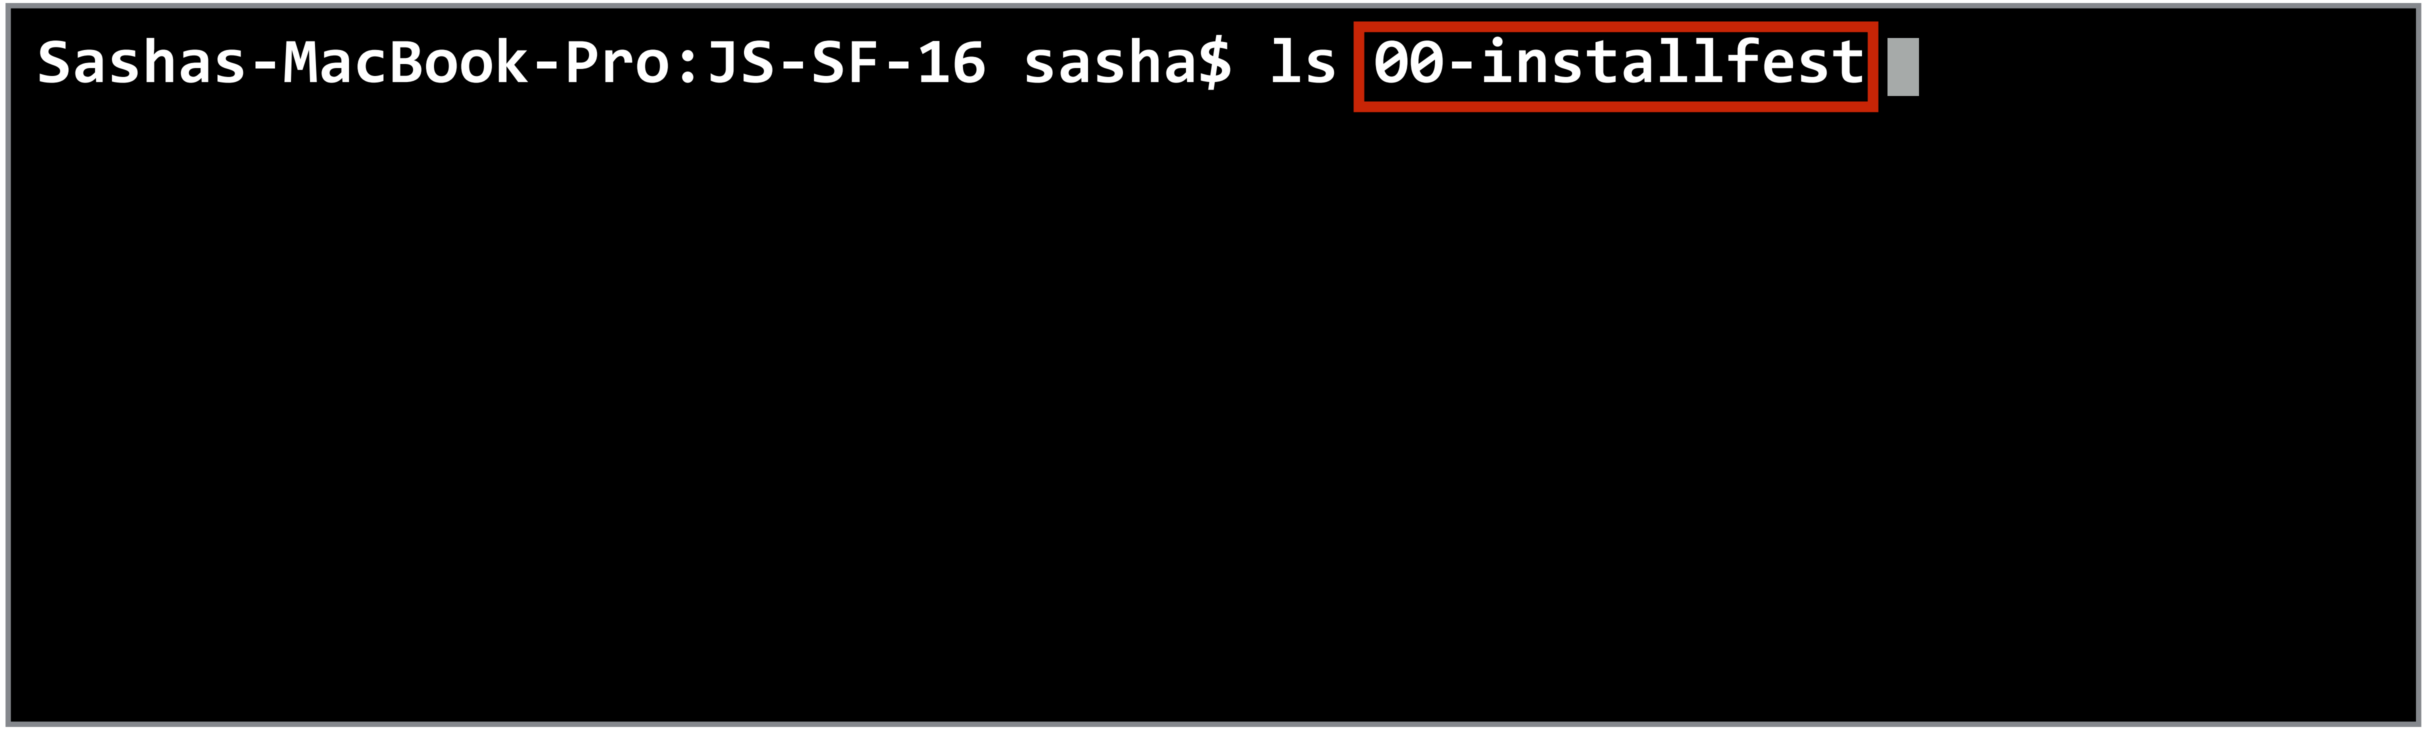
Command (program)



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ ls
```

ANATOMY OF THE TERMINAL

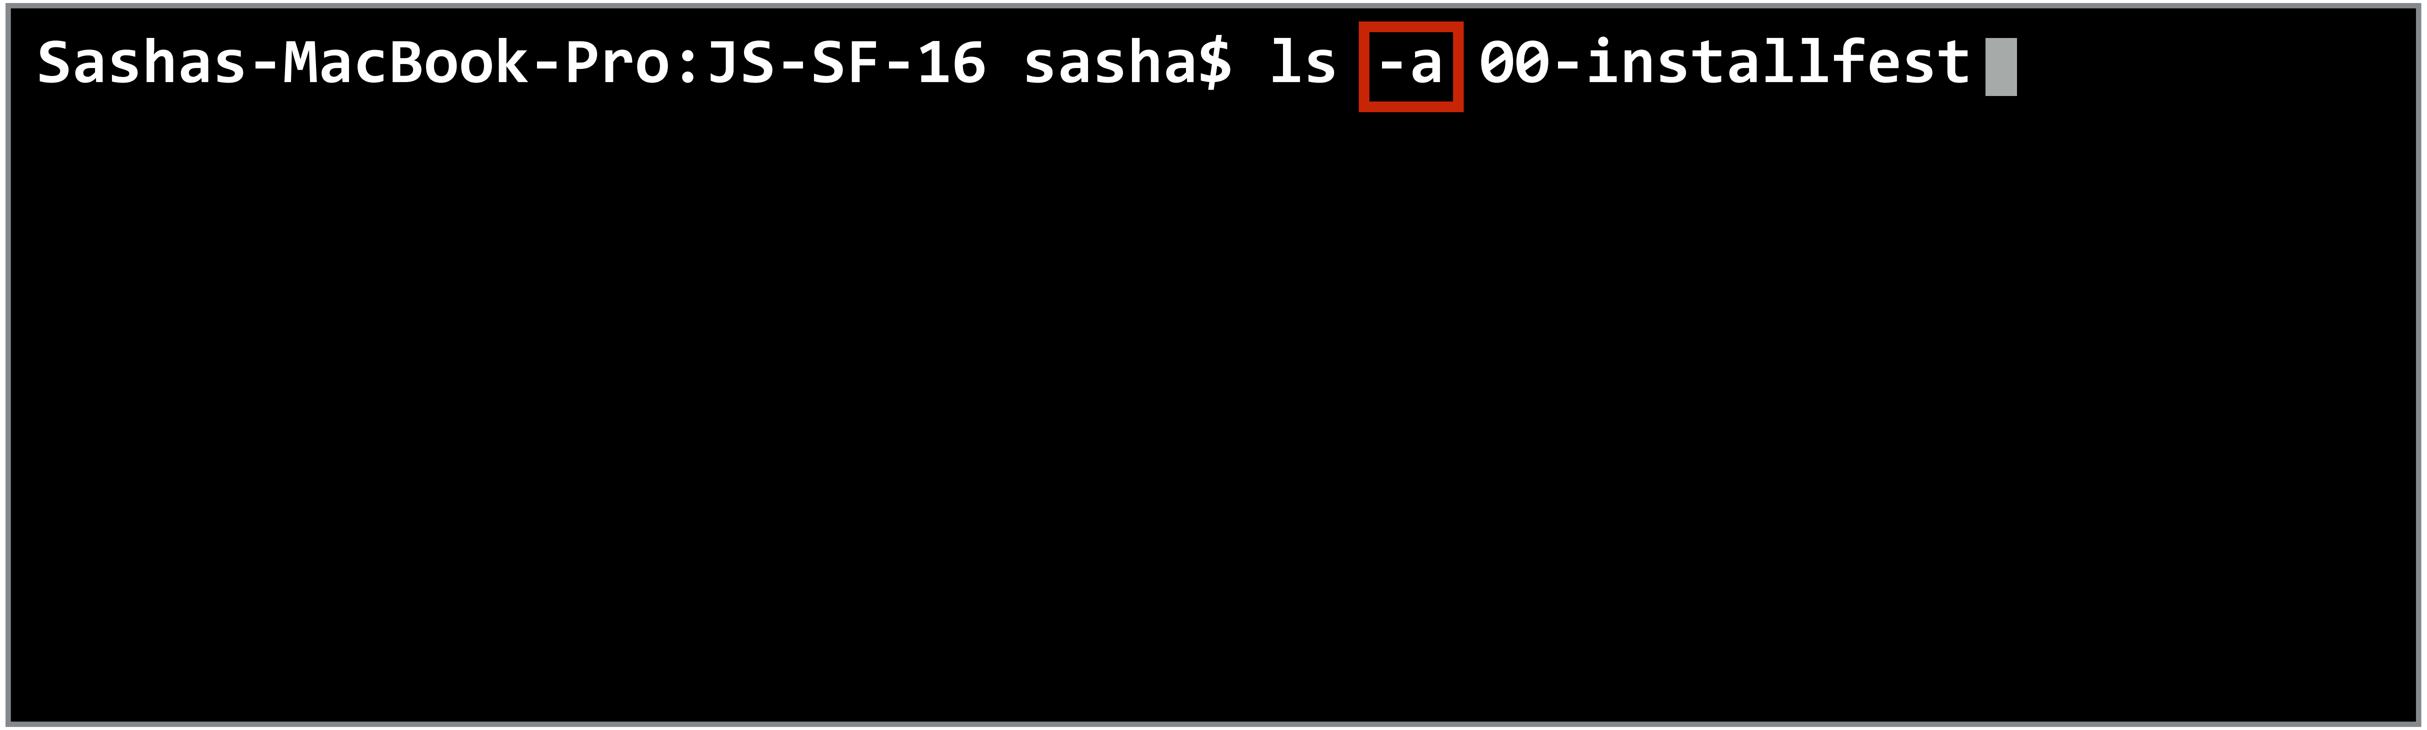
Argument (input)



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ ls 00-installfest
```

ANATOMY OF THE TERMINAL

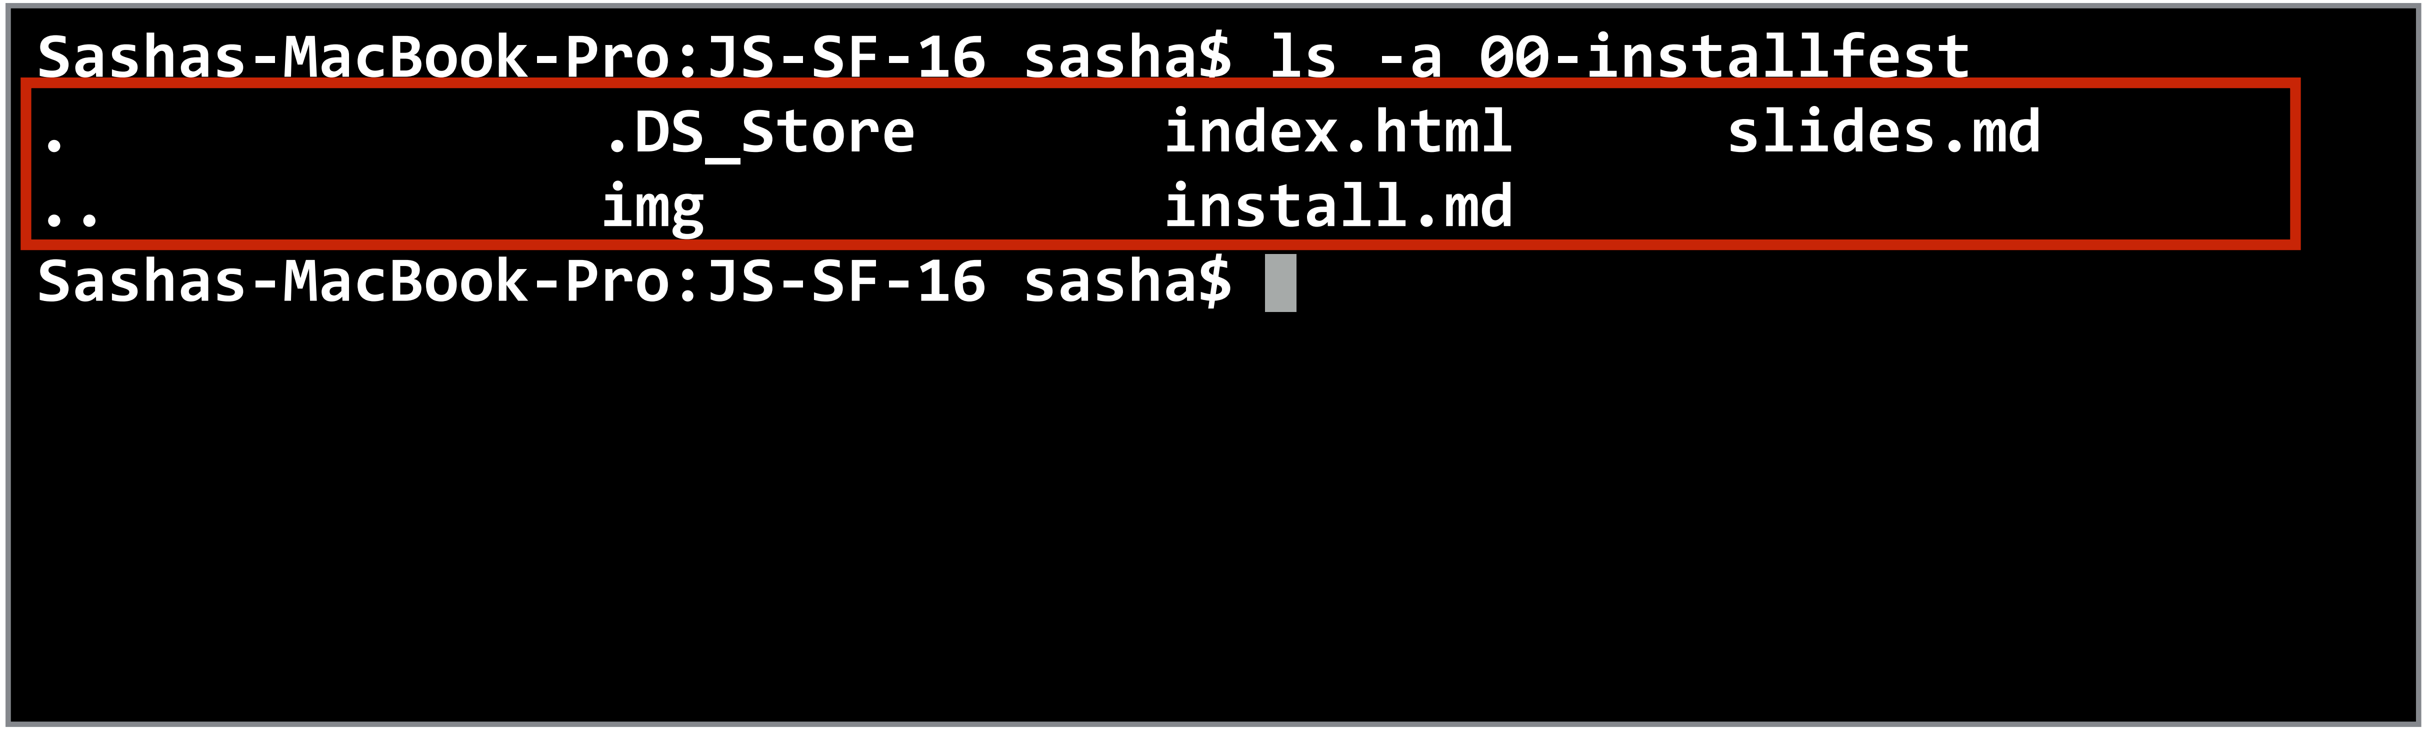
Option



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ ls -a 00-installfest
```

ANATOMY OF THE TERMINAL

Output



```
Sashas-MacBook-Pro:JS-SF-16 sasha$ ls -a 00-installfest
.               .DS_Store       index.html      slides.md
..              img             install.md
Sashas-MacBook-Pro:JS-SF-16 sasha$ 
```

THE COMMAND LINE & DATA TYPES

Command line codealong

For Mac

Open the Terminal app (Applications > Utilities > Terminal)

For Windows

Open the PowerShell application

LAB — COMMAND LINE

EXERCISE

KEY OBJECTIVE

- Use the most common commands to navigate and modify files / directories via the terminal window.

TYPE OF EXERCISE

- Individual/Pairs

TIMING

10 min Follow the instructions posted on the class website to navigate and modify files and directories using the command line.

EXERCISE — COMMAND LINE

EXERCISE

KEY OBJECTIVE

- Use the most common commands to navigate and modify files / directories via the terminal window.

TYPE OF EXERCISE

- Whole class brainstorm

TIMING

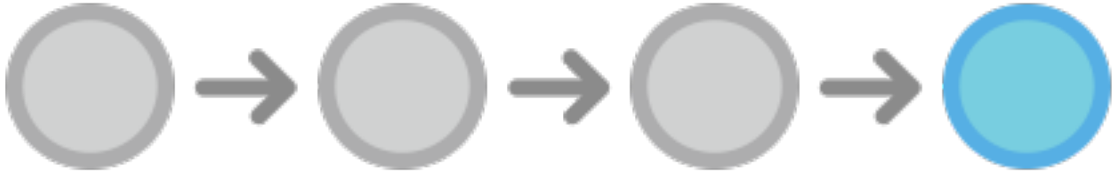
2 min	1. Name a command line command and explain what it does. Let’s hear from everyone at least once!

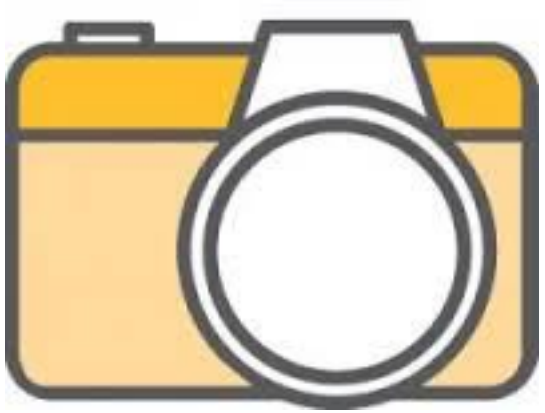
Introduction to Git/GitHub

THE COMMAND LINE & DATA TYPES

GIT

- A **version control** program that saves the state of your project's files and folders
- Basically, it takes a "snapshot" of what all your files look like at a moment and stores a reference to that "snapshot"





GITHUB

- A **web app/platform** that makes it easy to manage git repositories.
- Similar to Dropbox or Google Drive, but for code.
- Stores a history of files and the changes that happen within each changed document.
- Hosts files on the cloud so you can share the finished product with other people.
- **Git** - the technology that Github is based on top of - was designed to allow for multiple engineers to work on the same project.

Why use GitHub?

HISTORY

- Since GitHub stores a history of the code, it allows developers to go back in time if something breaks.

COLLABORATION

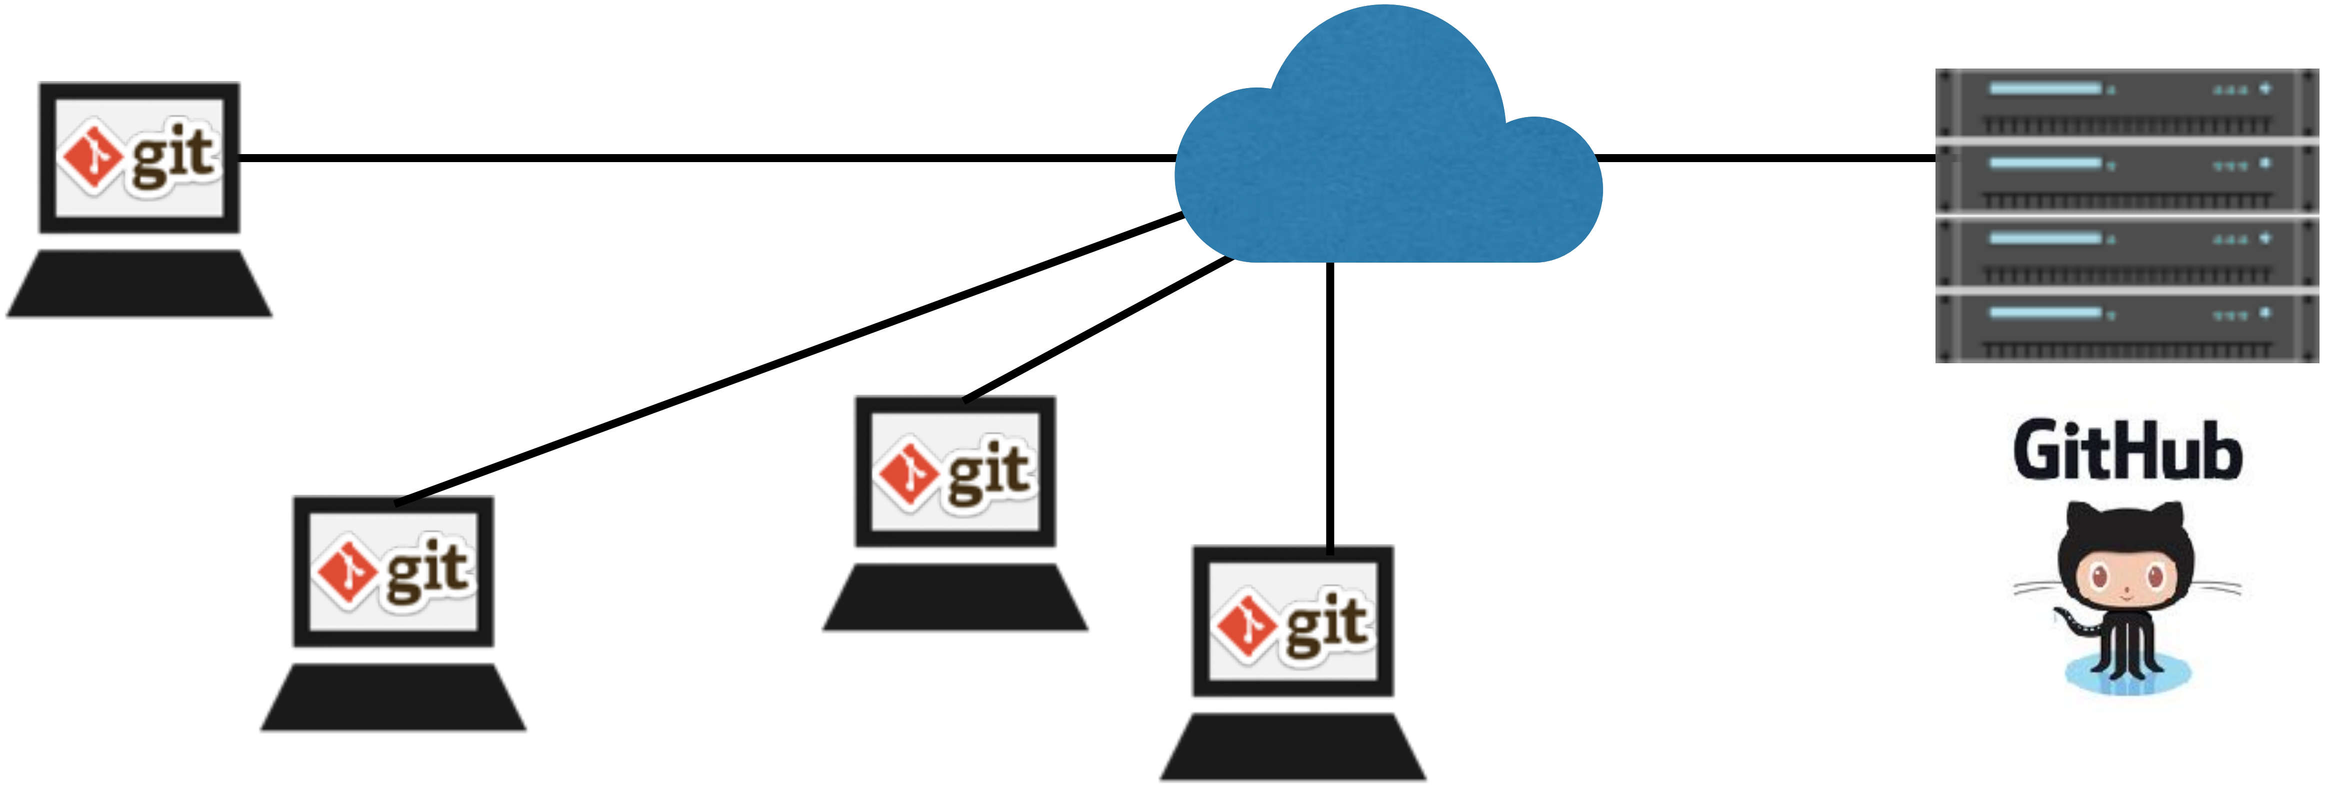
- Allows multiple developers to work on the same project. Much like Google Drive lets multiple people collaborate on the same document, GitHub allows this for code.
- You can see who worked on what.

FEEDBACK

- GitHub allows for feedback to be given on the code which, hopefully, increases code quality.

Git vs GitHub

- **Git** is version control software
- **GitHub** is a website and platform for utilizing Git in a collaborative way



Git/GitHub Vocabulary

- Repository
- Clone
- Commit
- Push
- Pull

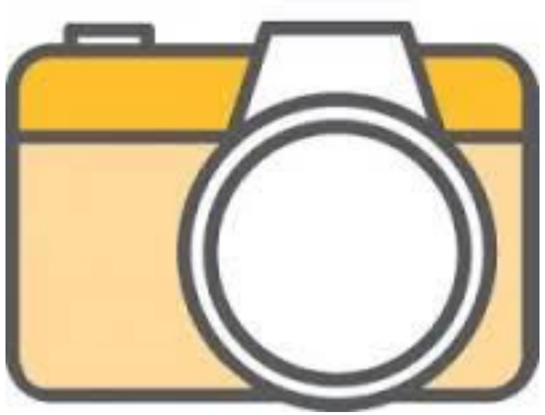
What is a repository (repo)?

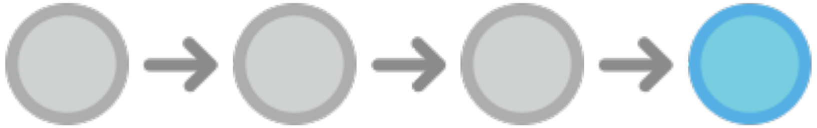
- Basic element of GitHub
- Contains all of a project's files (all the code)
- One or more users can contribute to a single repository
- Repositories are either public or private
- By the end of class today, you will create your own repo

`clone`

- Git command that copies/clones a **remote** repo to your machine
- This copy/clone is called a **local** repo
- Changes to the **local** repo will not affect the **remote**

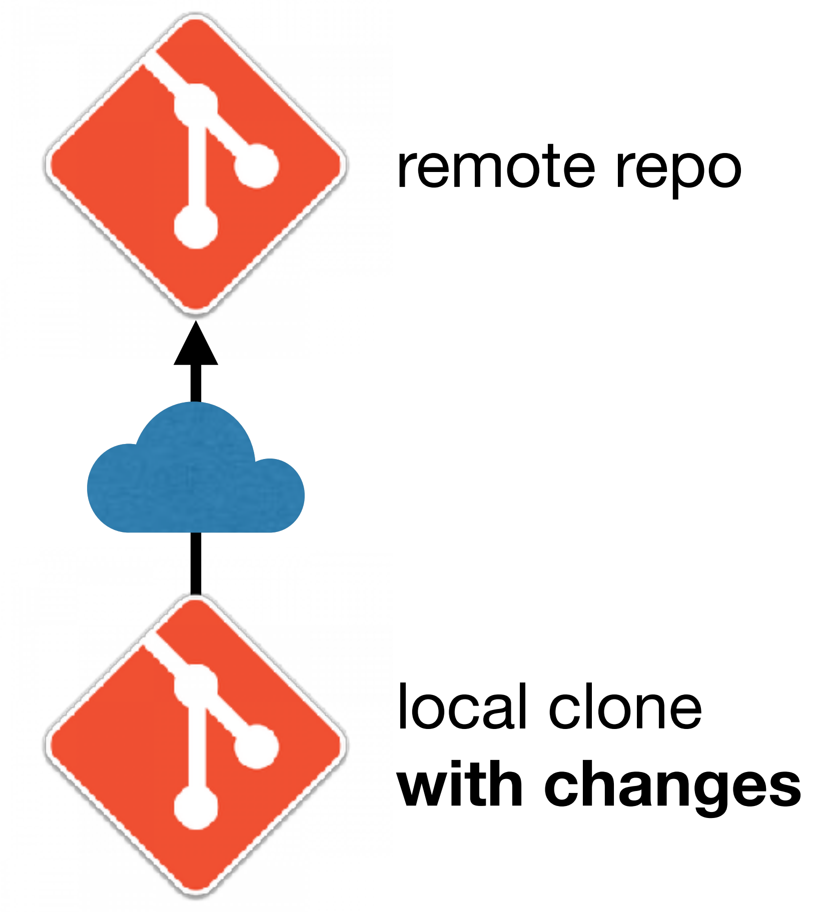
commit





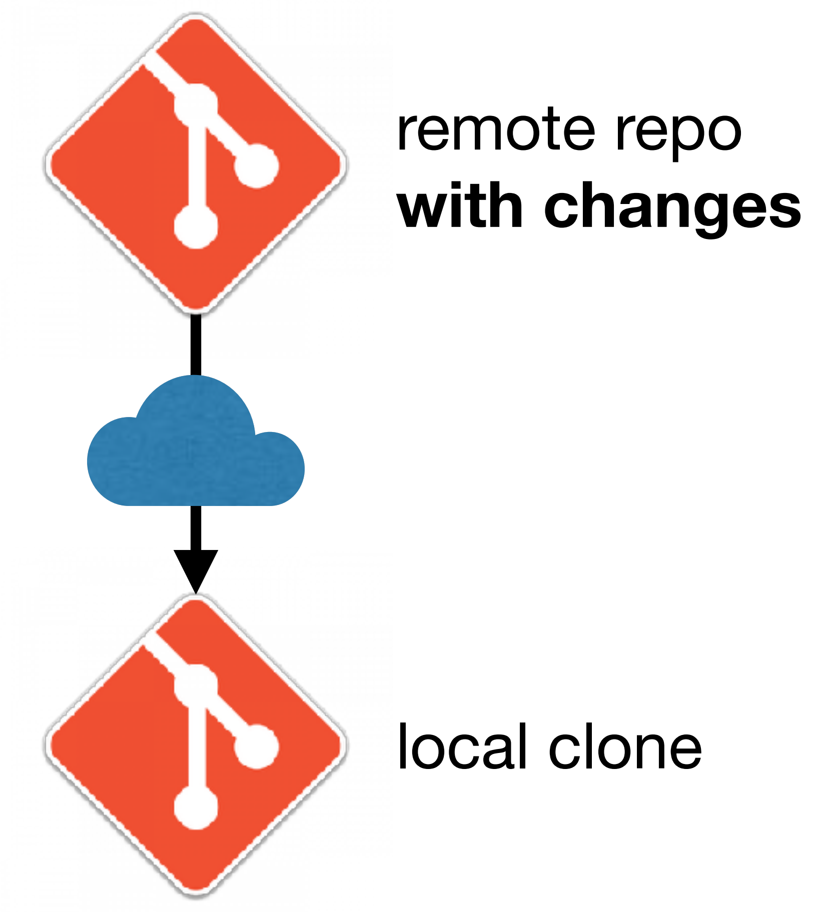
- Git command that creates a snapshot of changes to a repo
- Think of it as saving your changes with a timestamp
- Contains a message describing the changes made

push



- Git command that sends your commits (saved changes) to a **remote** repository
- Allows other developers to see your changes and copy ("pull") them to their own local repos

`pull`



- Git command that copies (pulls) changes by other developers from a remote repository to your local clone
- Allows you to see changes made by other developers and incorporate them into your local clone

How will we use GitHub in JSD15?

`JS-SF-16-resources`

- contains start and solution files
- you will pull changes at the start of each class

`JS-SF-16-homework`

- currently empty
- you will push your completed homework and receive feedback here

You will create your own additional repos for the 3 projects during this course.

GIT COMMANDS

THE COMMAND LINE & DATA TYPES

CODE ALONG

EXERCISE — GIT/GITHUB

EXERCISE

KEY OBJECTIVE

- Understand how to initialize a local Git repository and push/pull changes to a remote Git repository.

TYPE OF EXERCISE

- Pairs

TIMING

2 min

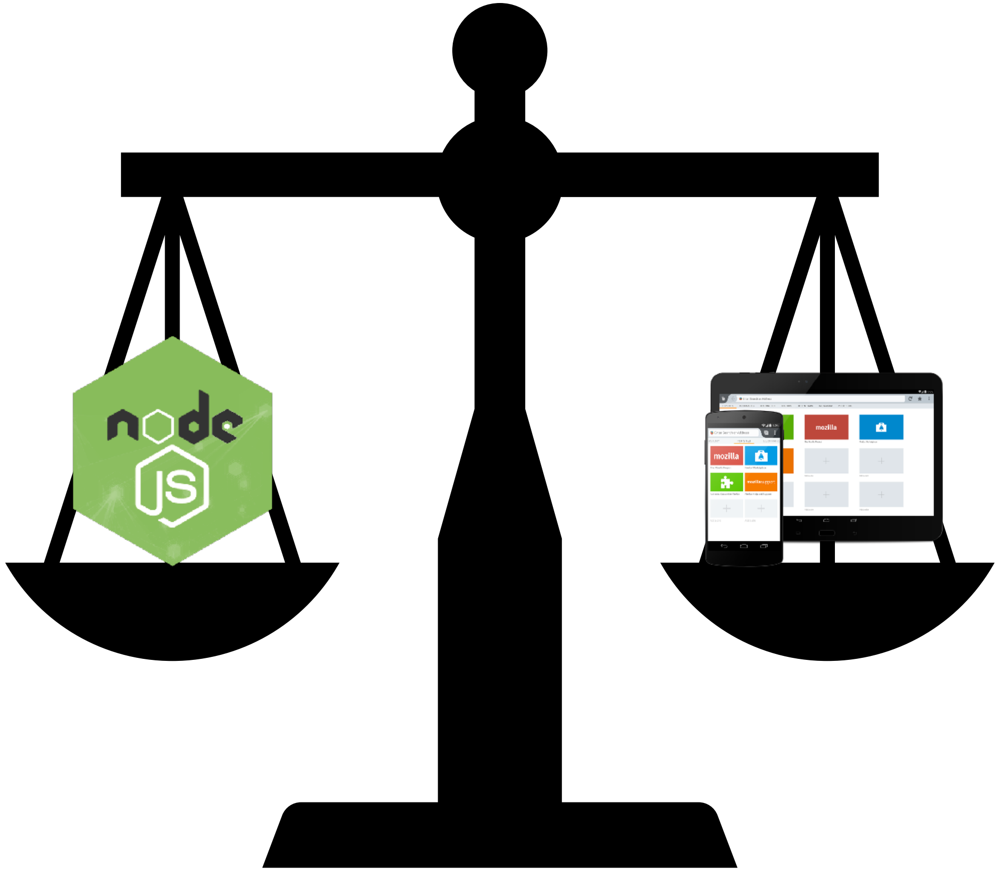
1. What command do you use to initialize a local Git repository? (Hint: Check the handout.) What does initializing do?
2. What command do you use to push changes to a remote Git repository? What does pushing do?
3. What command do you use to pull changes from a remote Git repository? What does pulling do?
4. BONUS: Draw a diagram illustrating all 3 commands

Intro to Node.js and command line JS

WENGER

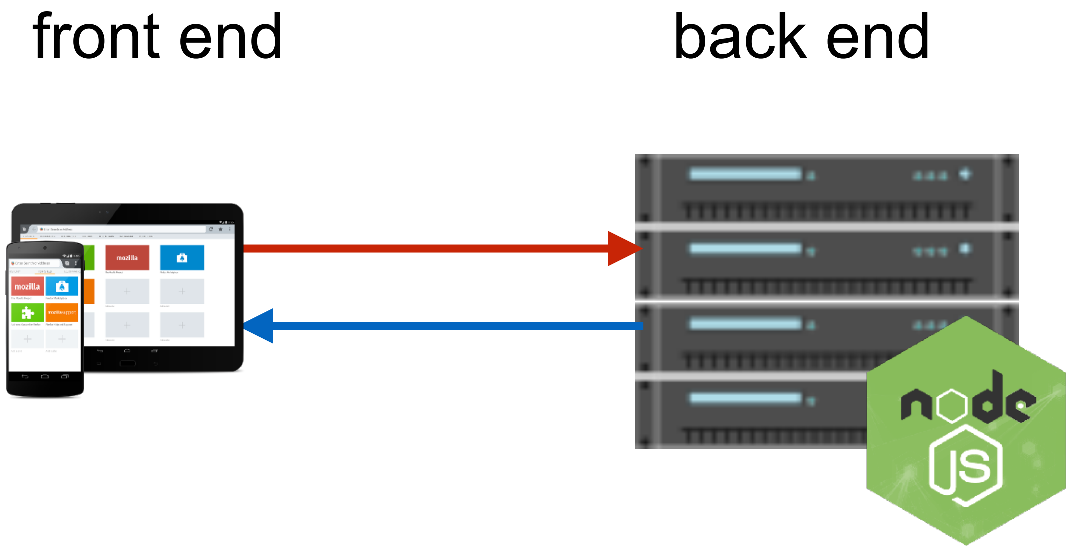
How is Node different from JS in the browser?

- No browser-specific functionality
- Same JS engine as Chrome



What is Node good for?

- Creating a backend server for a web application
- Running a script to do data analysis
- File management
- Making command line programs



front end

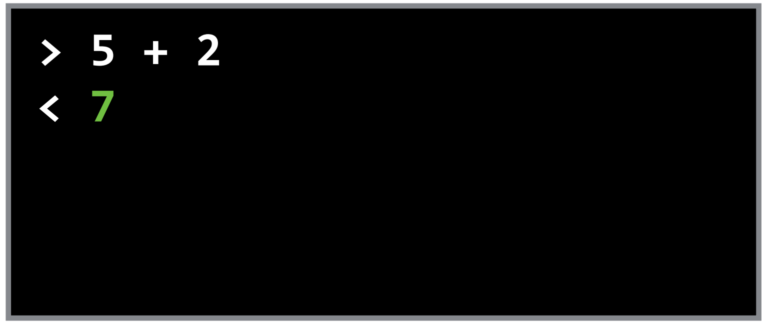
back end

Ways to run commands in Node

Interactive command line

Your command

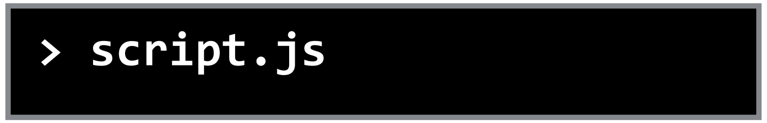
Node's response



```
> 5 + 2
< 7
```

Run a file

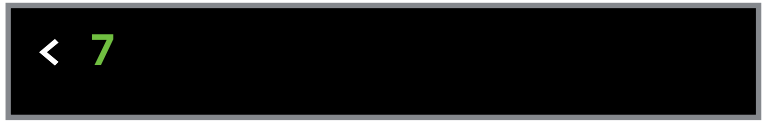
You



```
> script.js
```

Node loads the file script.js and executes its contents

Node



```
< 7
```

Executing JavaScript code

Variables

- Containers that allow us to store values
- Let us tell our program to remember values for us to use later on
- The action of saving a value to a variable is called **assignment**

Declaring a variable

```
let age;
```

Assigning a value to a variable

```
age = 29;
```

Declaring and assigning in a single statement

```
let age = 29;
```

Printing things out for our own inspection

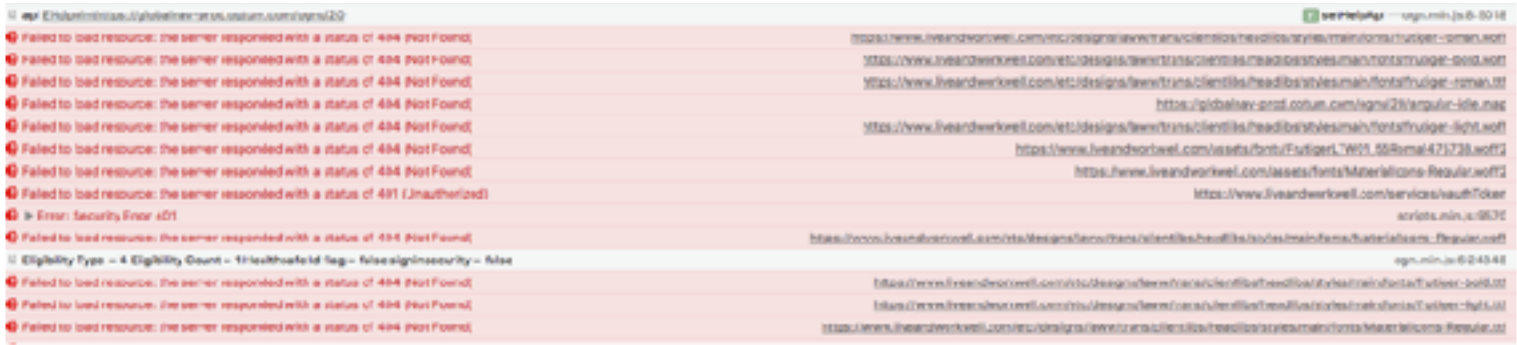
```
console.log("Hello!");
```

Printing a variable value out for our own inspection

```
console.log(age);
```

When do you use console.log?

- When you are developing a program and need help figuring out what’s going on (aka debugging)
- When you want to print things to the command line



```

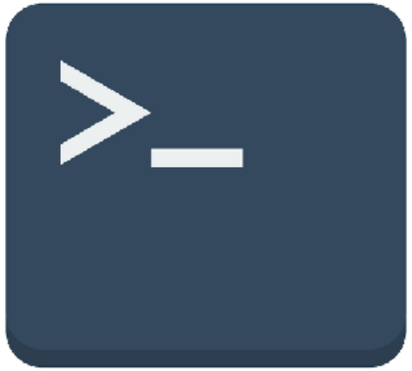
browser developer tools



command line

Let’s write some JavaScript!

THE COMMAND LINE & DATA TYPES

Exit the Node console

Node prompt

```
>
```

`control` + `C` twice

BASH prompt

```
$
```

EXERCISE — NODE

EXERCISE

KEY OBJECTIVE

- Run basic JavaScript code on the command line using Node.

TYPE OF EXERCISE

- Turn and talk

TIMING

2 min

1. What is Node?
2. What did we use it for today?
3. BONUS: How else can it be used?

DATA TYPES

THE DATA TYPE IDENTIFIES THE KIND OF DATA

"I just pushed my changes to the repo."

`string`

"red", "orange", "yellow", "green", "blue", "violet"

`array`

42

`number`

STRINGS

"a"

"satisfied"

"none of the above"

"The only difference between me and a madman is that I'm not mad. - Salvador Dali”

NUMBERS

1.5

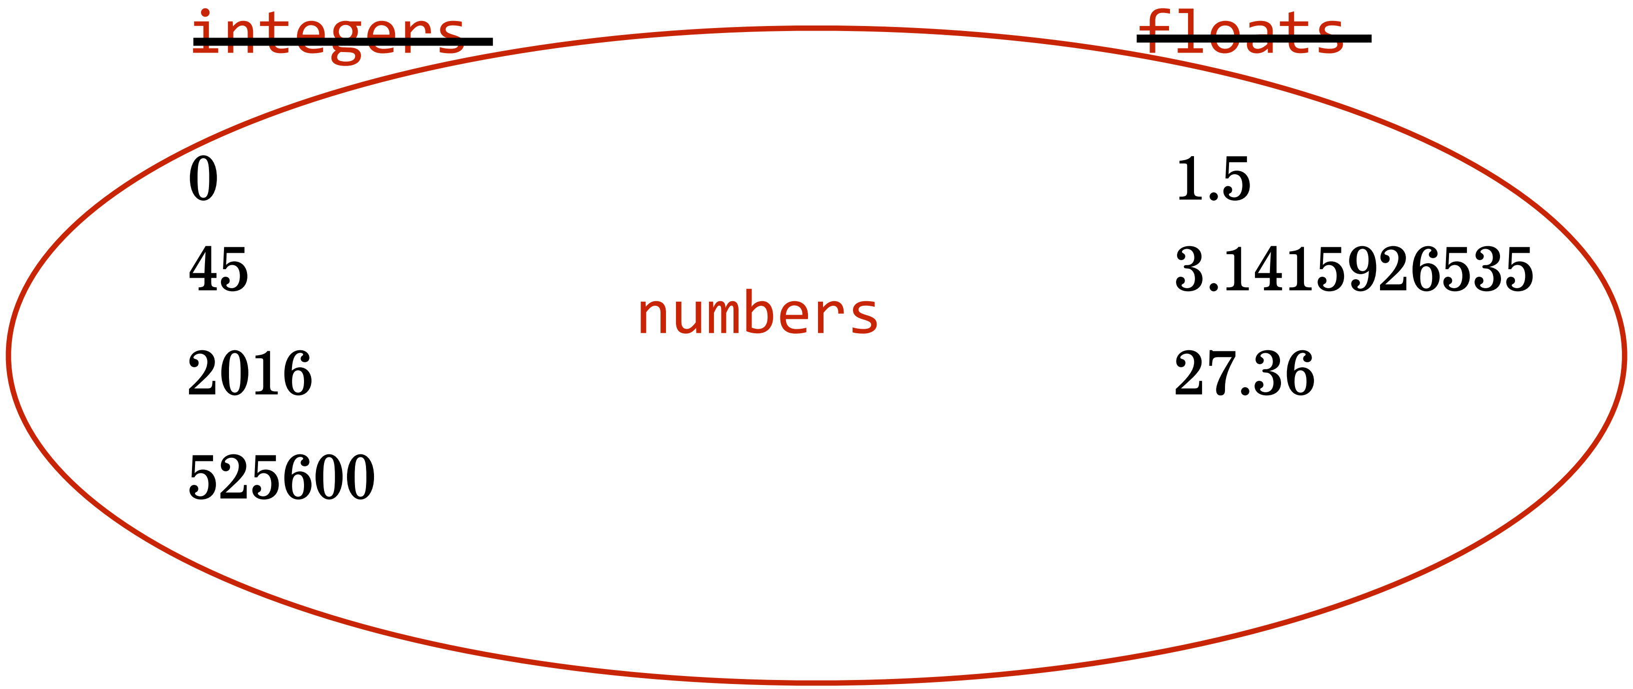
3.1415926535

27.36

45

525600

SOME LANGUAGES TREAT INTEGERS AND FLOATS AS SEPARATE TYPES, BUT NOT JAVASCRIPT



~~integers~~	~~floats~~
0	1.5
45	3.1415926535
2016	27.36
525600	

numbers

WORKING WITH DATA IN JAVASCRIPT

LIBRARY OF OBJECTS

```
Array()
Date()
Math()
…
```

LANGUAGE ELEMENTS

Operators (`+ - * / %` …)

Statements

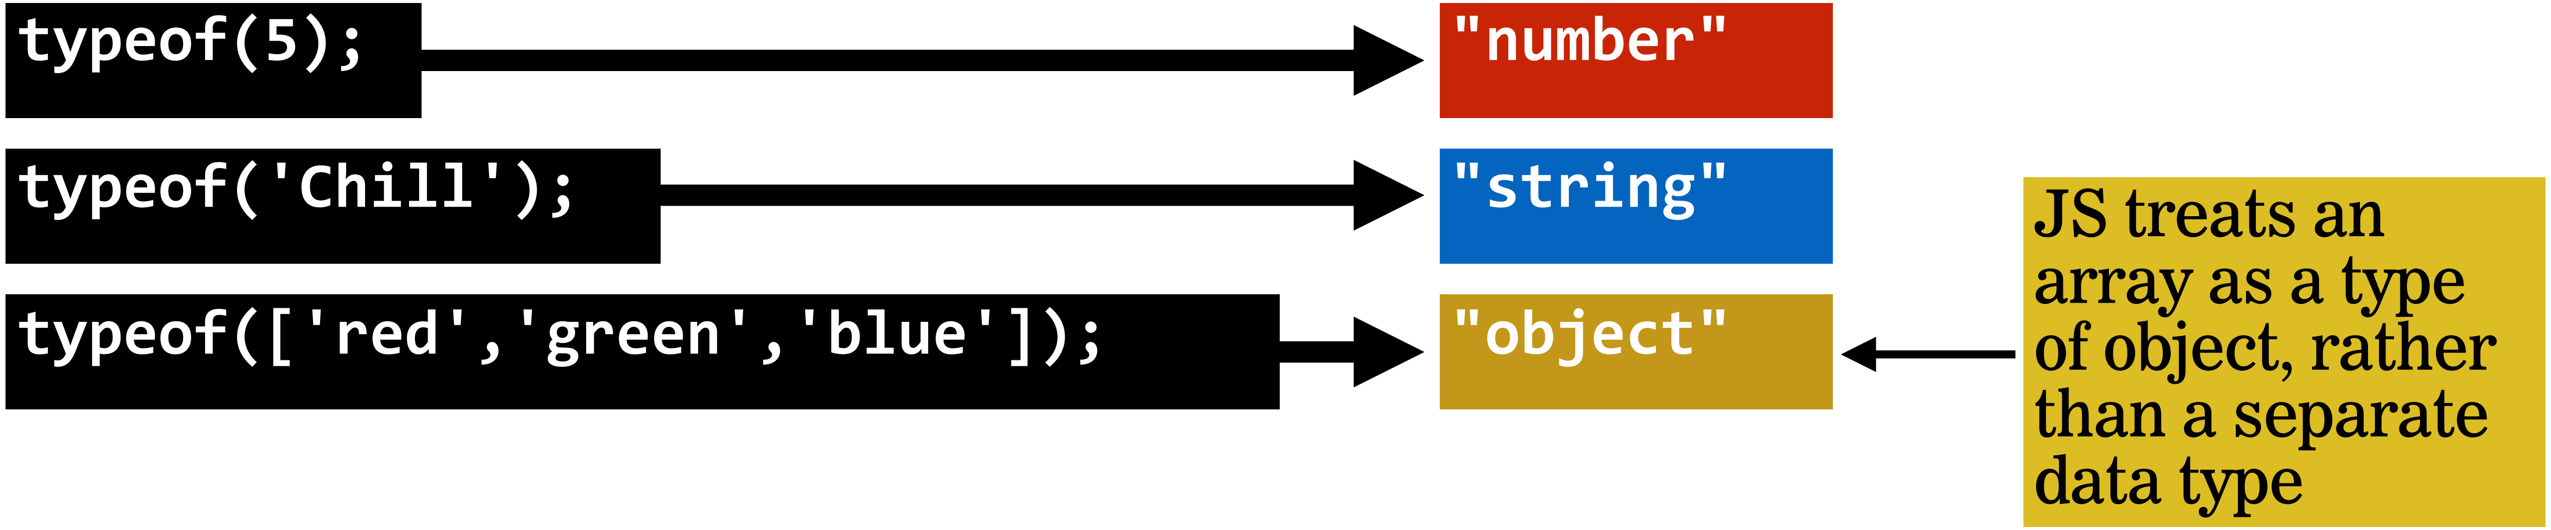
```
  for
  function
  return
  …
```

DOM MANIPULATION

- create elements
- place elements in the browser window
- change properties of elements in the browser window
- respond to user events

IDENTIFYING DATA TYPE

- `typeof()` function
- Returns a string naming the data type of the data you pass to it
- Syntax:
  - `typeof(`*`data`*`)`, where `data` is a number, string, or other data



```
typeof(5);
```

"number"

```
typeof('Chill');
```

"string"

```
typeof(['red','green','blue']);
```

"object"

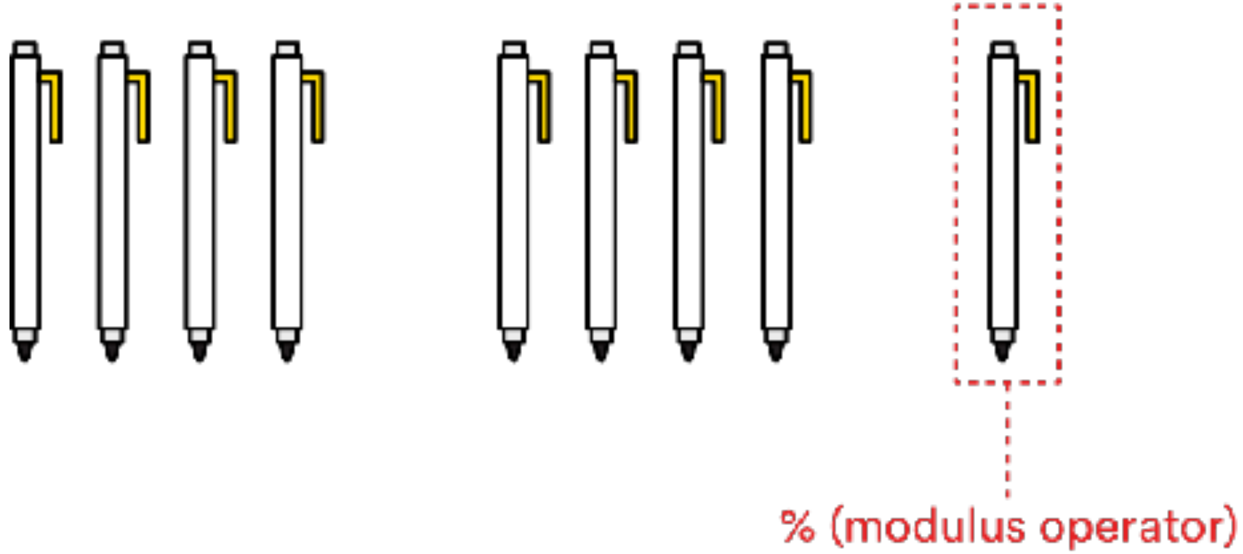
JS treats an array as a type of object, rather than a separate data type

ARITHMETIC OPERATORS

+	add (also concatenates strings)
-	subtract
*	multiply
/	divide
%	modulus (remainder)

DATA TYPES & LOOPS

9 % 4



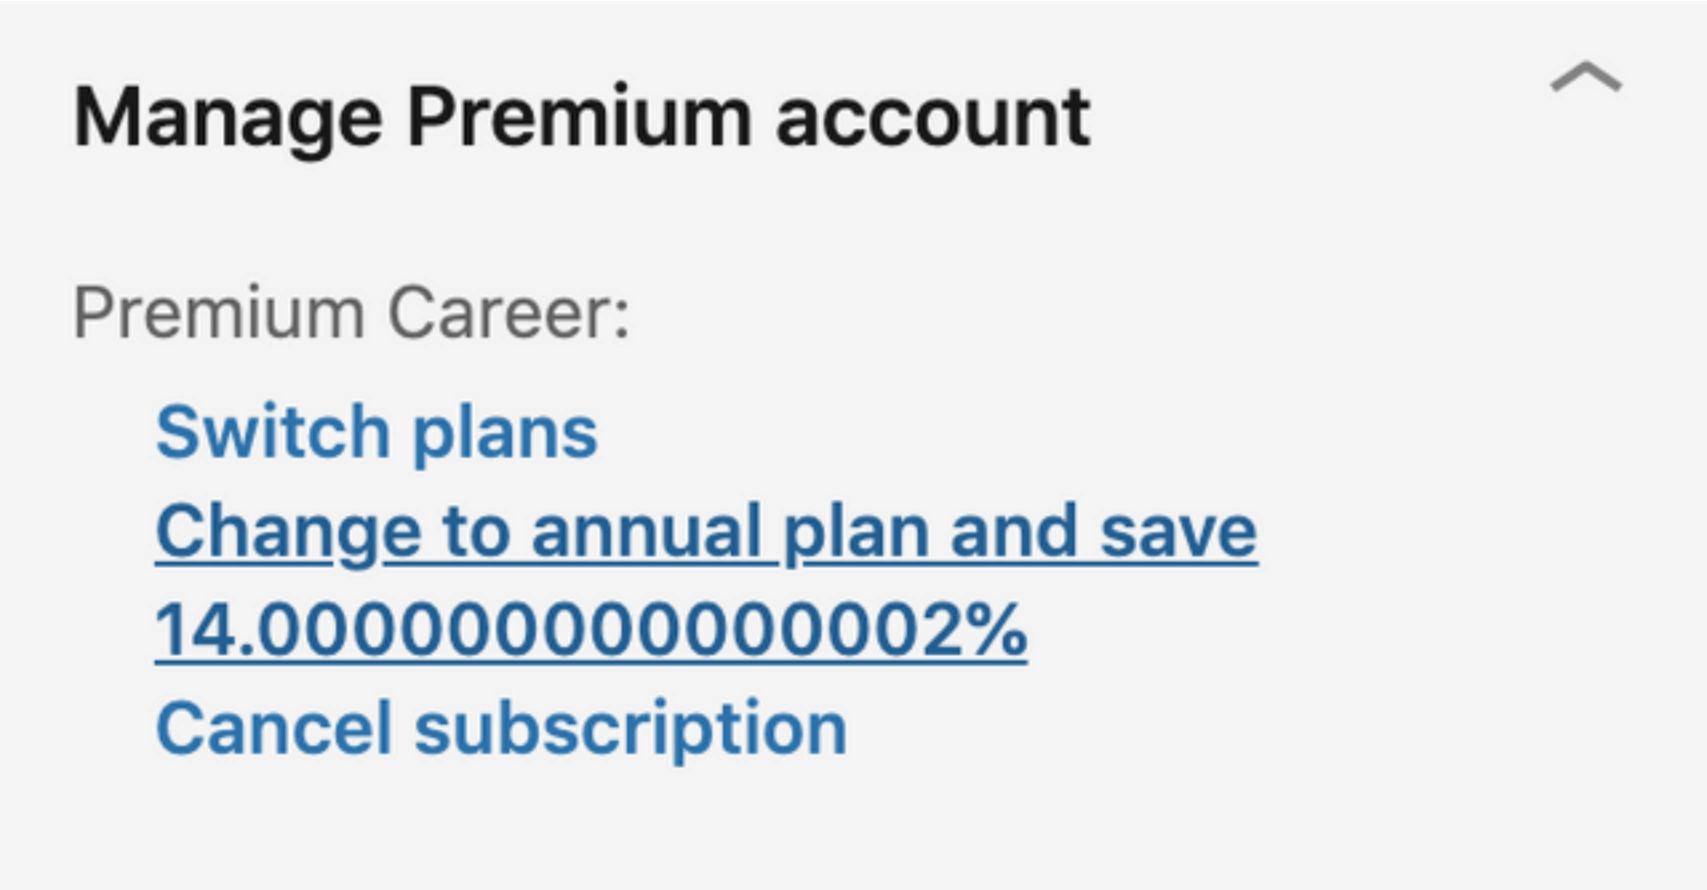
% (modulus operator)

THE COMMAND LINE & DATA TYPES

</>

CODE ALONG

THE COMMAND LINE & DATA TYPES



Manage Premium account

Premium Career:

Switch plans

Change to annual plan and save 14.00000000000002%

Cancel subscription

SPECIAL NUMBER OPERATORS

The `Math` object provides methods for additional operations

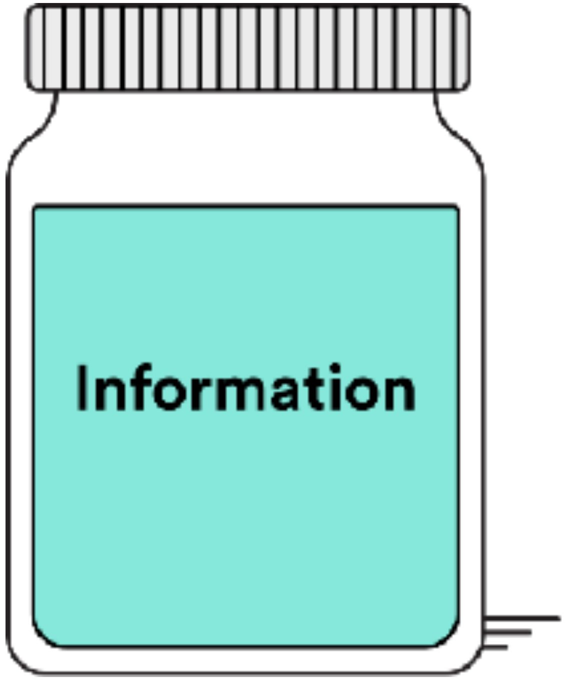
`Math.pow(m,n)`	Returns `m` to the power of `n`
`Math.sqrt(n)`	Returns the square root of `n`
`Math.random()`	Returns a random number between 0 (inclusive) and 1 (exclusive)
`Math.floor(n)`	Returns largest integer less than or equal to `n`
`Math.ceil(n)`	Returns smallest integer greater than or equal to `n`

THE COMMAND LINE & DATA TYPES

VARIABLES

WHAT ARE VARIABLES?

- We can tell our program to remember (store) values for us to use later on.
- The 'container' we use to store the value is called a **variable**



DECLARING A VARIABLE

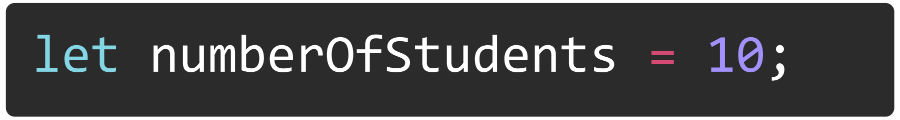
```
let age = 29;
```

VARIABLE CONVENTIONS

RULES:

1. Should be "camel case" — First word starts with a lowercase letter and any following words start with an uppercase letter.
2. Names can only contain: letters, numbers, $ and _
3. No dashes, no periods.
4. Cannot start with a number
5. Case sensitive - `numberofstudents` is not the same as `numberOfStudents`

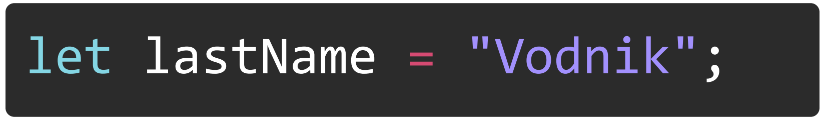
★



```
let numberOfStudents = 10;
```

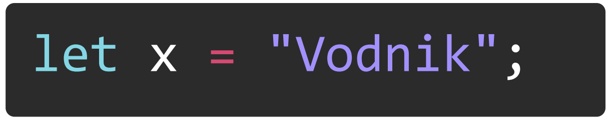
Guideline: Names should be descriptive:

★



```
let lastName = "Vodnik";
```

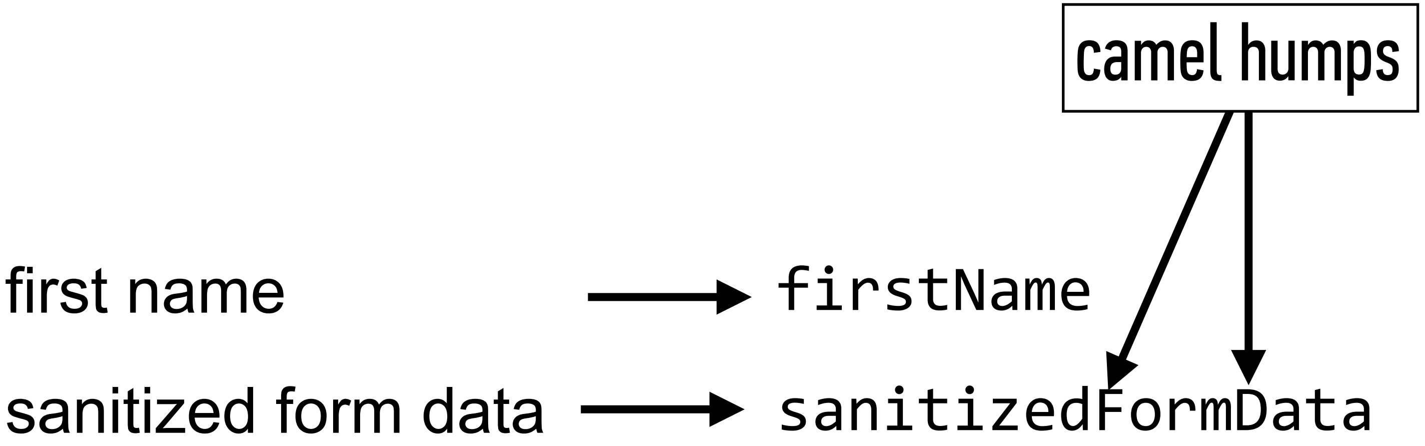
✗



```
let x = "Vodnik";
```

CAMEL CASE

- Use when creating a name based on multiple words
- Remove spaces, then capitalize the first letter of the second and subsequent words



camel humps

first name → `firstName`

sanitized form data → `sanitizedFormData`

JAVASCRIPT — UPDATING THE VALUE OF A VARIABLE

Declaring a variable:

```
let host = "Sasha";
```

Update the value of the variable:

```
host = "Ray";
```

KEYWORDS FOR DECLARING VARIABLES

keyword	when will we learn it?
`let`	We will use `let` today
`var`	We will learn about `var` and `const` next week
`const`	

Printing text out for our own inspection

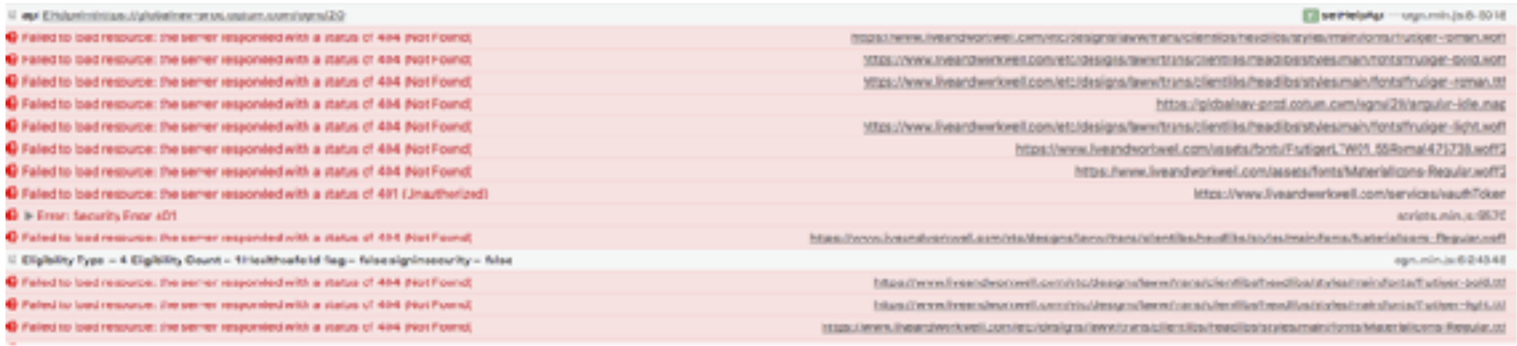
```
console.log("Hello!");
```

Printing a variable value out for our own inspection

```
console.log(age);
```

When do you use `console.log`?

- When you are developing a program and need help figuring out what's going on (aka debugging)
- When you want to print things to the command line



```
[illegible]                                                                      [illegible]

```

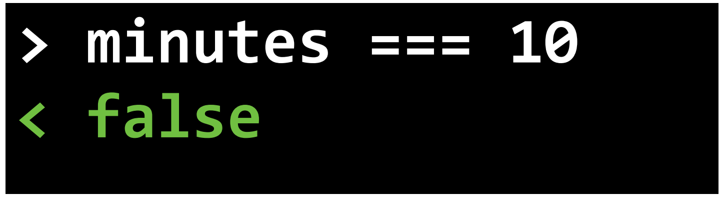
browser developer tools

command line

KNOW YOUR EQUAL SIGNS

=	assigns value on right to object on left
===	evaluates whether values on left and right are the same

```
let minutes = 17;
```



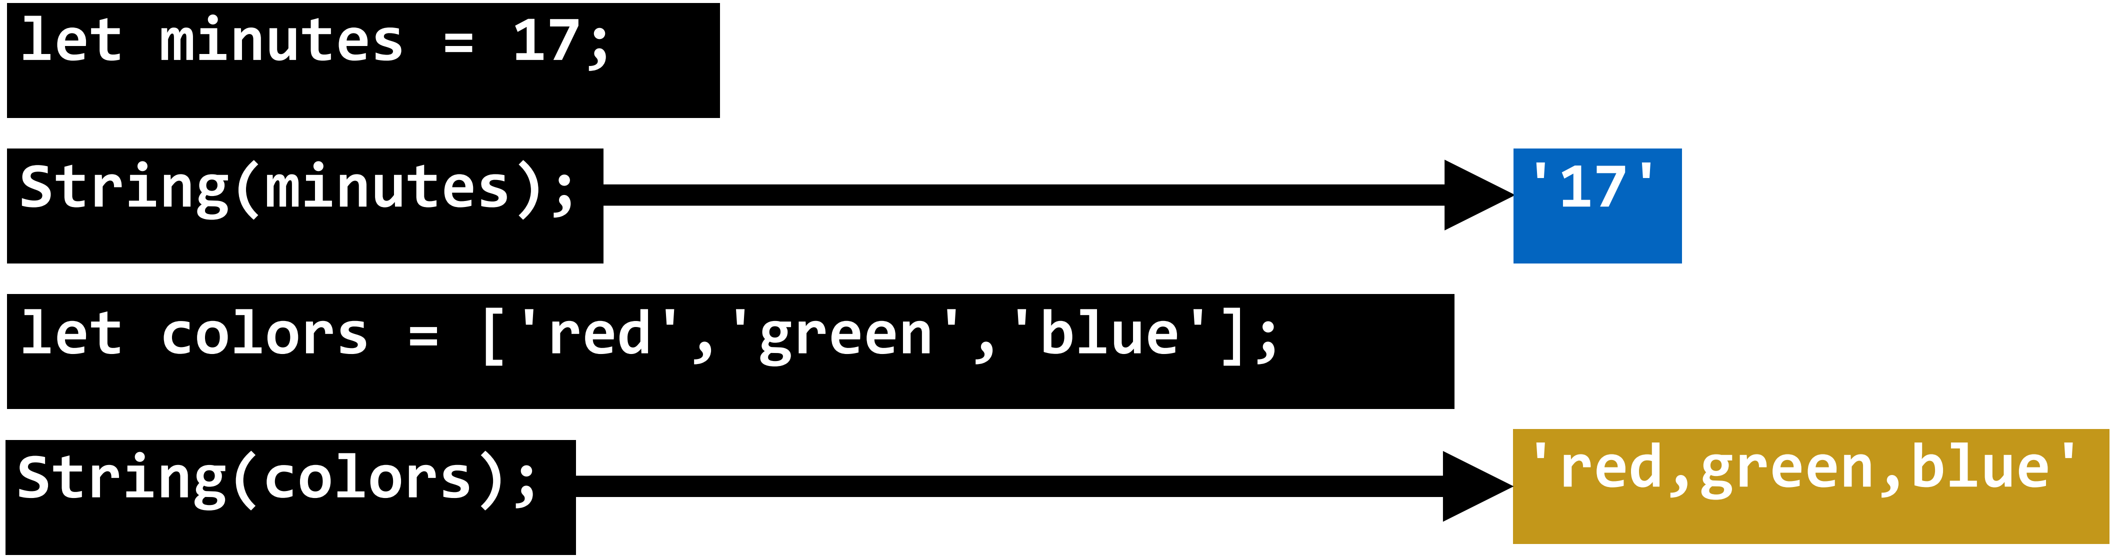
```
> minutes === 10
< false
```

COMPOUND OPERATORS

+=	adds a number to a variable and assigns the new value to the same variable
-=	subtracts a number from a variable and assigns the new value to the same variable
++	adds 1 to a value
--	subtracts 1 from a value

TRANSFORMING A VALUE INTO A STRING

- `String()` function
- Returns the original value as a string
- Syntax:
    - `String(`*`data`*`)`, where *data* is the name of a variable



```
let minutes = 17;
String(minutes);
```

'17'

```
let colors = ['red','green','blue'];
String(colors);
```

'red,green,blue'

```

ACTIVITY — VARIABLES & DATA TYPES

ACTIVITY

KEY OBJECTIVE

- Describe the concept of a "data type" and how it relates to variables.

TYPE OF EXERCISE

- Turn & Talk

EXECUTION

2 min

1. Describe variables. Explain why we would want to use variables in our programs.
2. What are the three data types in JS? Can you think of an example of each?

Exit Tickets!

(Class #1)

LEARNING OBJECTIVES - REVIEW

- Work with files/directories via the terminal window
- Create a Git repository and push/pull changes
- Run basic JavaScript code on the command line
- Describe the concept of a "data type" and how it relates to variables.

Next class preview: Arrays & Loops

- Declare, assign to, and manipulate data stored in a variable.
- Create arrays and access values in them.
- Iterate over and manipulate values in an array.
- Build iterative loops using `for` statements.

Q&A
